Hiring Team, Datadog

Your posting asks for someone who can develop real expertise in Datadog's licensing and pricing models, then use it to negotiate directly with customers and solve satisfaction issues that show up after a deal closes, not just structure the quote. I built that exact loop at Sensata leading the Bleeders and Leakers program, deal-by-deal negotiation against competitive gaps and each customer's own willingness to pay, and recovered \$700K plus in margin in two quarters. That is customer-facing deal judgment, not a spreadsheet exercise.

I have since built the tooling side of that same discipline. PriceKeel, the company I founded, reads a live discount exception inside the deal platform and recommends a guardrail learned from a company's own closed-won and closed-lost history. I set up and run its CRM, CPQ configuration and deal-approval workflow myself, then built the audit trail that gives Finance an explainable record behind every exception, so I know what internal controls and business rules have to look like from both the analyst's chair and the system's.

The cross-functional part of this role, coordinating sales operations, contracts, legal and finance on one quote, is not new either. At Sensata I worked directly with senior executives and Finance on AP26 revenue models and multimillion-dollar customer quotes, and built the FY2026 Bleeders and Leakers Power BI dashboard that tracked 1,200 pricing opportunities against a \$627M target across three regions, surfacing \$433M in margin gaps by salesperson so leadership could prioritize instead of guess. Raising distributor and channel-partner margins from 53% to 61% in the same program came from documenting the new discount logic well enough that Finance could audit it on sight.

Right now, as Strategic Marketing III at Applied Materials, I develop expertise in pricing models for a market moving fast enough that I automate the repetitive analysis with Claude AI agents, then apply that expertise as the pricing resource sales turns to on deal questions. I would bring someone who has already sat on both sides of a complex SaaS quote, not someone learning CPQ configuration on the job. Proof trail at adhi-pricing-ai.vercel.app/ref/datadog.
