Hiring Team, Google

Your posting asks for someone who can optimize pricing, promotions, and portfolio decisions against revenue and margin targets. I led that work for a multi-$100M industrial business at Sensata: recovered $700K+ in margin in two quarters through a program I ran on competitive gaps and customer willingness-to-pay, then moved distributor and channel margins from 53% to 61% by repricing parts sold through distribution. That is the muscle this role is asking for, just pointed at an accessory and device portfolio instead of sensors.

The cross-functional half of the role is familiar territory too. I owned go-to-market end to end for a new Sensata product line, positioning, pricing, channel, and launch, across North America and Europe, closing the year at $2M+ in first-year revenue. That meant sitting with Engineering on the roadmap, running 30+ customer interviews with OEMs and distributors to find what actually drove adoption, and writing the sales narrative 50+ reps carried into the field. Coordinating Design, Engineering, Brand, and Sales toward one launch date instead of three competing ones is the same job, just with more partners at the table.

On the preferred side: I run my own market and pricing analysis through AI agents built on Claude at Applied Materials today, and before that I built an AI product zero-to-one on my own, PRD through launch. I also come at the consumer side of this role honestly. My direct consumer-market reps are retail catalog and feed work (Google Merchant Center, Meta) and retail media (Amazon Ads, Criteo) for D2C brands, not a physical hardware SKU, but the discipline of turning consumer data into a portfolio and pricing call is the same discipline either way.

Fitbit's hardware line is the kind of portfolio where a pricing call and a positioning call are really the same decision made twice. I would rather make that case directly than from a resume line. Proof trail at adhi-product-ai.vercel.app/ref/google. Happy to talk whenever works on your side.
