PITCH DECK | GOOGLE PRODUCT MARKETING MANAGER, FITBIT HARDWARE

A hardware and accessory portfolio has one pricing decision and one positioning decision for every SKU, not two separate ones made by two separate teams. I have already run that combined decision at a multi-$100M scale.

Margin recovery and portfolio pricing on one side, end-to-end GTM and positioning on the other, both run by the same person.

- **$700K+ margin recovered** in two quarters leading pricing and portfolio strategy at Sensata
- **53% to 61%** distributor and channel margins repriced in under two quarters
- **$2M+ first-year revenue** from an end-to-end GTM launch, positioning through channel
- **+12% YoY revenue, +8% market share** from competitive price realignment
- **AI agents built on Claude** automating my own recurring market and pricing analysis today

WHY THIS DECK EXISTS

The posting does not ask for a positioning writer and a pricing analyst. It asks for one person who treats pricing, portfolio, and positioning as a single decision.

What that actually requires

Pricing, promotions, and portfolio calls made against the same revenue and margin targets that positioning and messaging have to carry, not handed off after Finance locks a number.

A GTM plan that stays aligned across Design, Engineering, Brand, Sales, and regional teams from the first form-factor conversation, not from the launch deck onward.

A narrative builder who can sit across from Finance and Merchandising one day and Engineering the next, in the same language both sides use.

What I have already run

At **Sensata**, I carried P&L and revenue targets for a multi-$100M Industrial BU while also owning the positioning and GTM that shipped against those same targets, on the same product lines.

I recovered **$700K+ in margin** and repriced distributor margins **53% to 61%** using the same competitive and willingness-to-pay data that fed the positioning work next door.

At **Applied Materials** today, I automate my own recurring market and pricing analysis with AI agents built on Claude, so the forecast and the narrative stay in sync without a lag.

The through-line: every pricing call I have made was built from the same customer and competitive data that fed the positioning next to it, never in a separate process.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Partner with Finance, PM, and Merchandising to optimize pricing, promotions, and portfolios to meet revenue and margin targets."*

> *"Coordinate alignments across Design, Engineering, Brand, Sales, and regional teams to ensure flawless execution of campaigns and product launches."*

> *"Develop and execute comprehensive, user-centric global GTM plans."*

My proof

Sensata, margin and portfolio pricing: recovered $700K+ in margin in two quarters and raised distributor margins 53% to 61%, carrying P&L and revenue targets for a multi-$100M Industrial BU the whole time.

Sensata, cross-functional launch coordination: coordinated the product roadmap with Engineering in Agile across 3 regions, running a 100+ feature backlog that cut time-to-market 20%.

Sensata, end-to-end GTM: owned positioning, pricing, channel, and launch for a new product line across North America and Europe, closing the year at $2M+ revenue.

Applied Materials, AI-productivity tools: automate recurring market and pricing analysis with agents built on Claude, the exact preferred qualification this posting names.

THE PROOF, IN DEPTH

Margin recovery and GTM revenue are not two different skill sets. They are the same data, pointed at two different line items.

Same pattern on every product line at Sensata: read the competitive and customer data once, then use it to set the price and write the message in the same sitting.

$700K+

Margin Recovered in Two Quarters

Led the Bleeders & Leakers program at Sensata, negotiations built on competitive gaps and customer willingness-to-pay.

53% to 61%

Distributor and Channel Margins

Repriced parts sold through distribution in under two quarters, on top of the margin-recovery program.

$2M+

First-Year Revenue, End-to-End GTM

Positioning, pricing, channel strategy, and launch execution shipped in one motion for a new sensing product line.

The common thread: none of this was a pricing memo that sat in a folder separate from the launch plan. Each number closed the loop from competitive data to a price, a message, and a revenue result.

FIRST 30 DAYS

What the first month on Fitbit's hardware and accessory portfolio looks like.

WEEK 1

Map the portfolio's pricing-to-positioning handoff

Trace the last few device and accessory launches to find where pricing, promotion, and portfolio calls were made separately from positioning and messaging, and where that gap cost margin or launch alignment.

Why first: the same first move behind the Sensata Bleeders & Leakers program, find where the data and the decision disconnect before rebuilding either.

WEEK 2-3

Run one SKU's margin and portfolio model end to end

Pick one device or accessory line, build the pricing and promotion model against revenue and margin targets with Finance and Merchandising, and write the positioning and GTM plan from the same underlying data.

Why now: the same combined pricing-and-positioning motion that recovered $700K+ in margin and shipped $2M+ in GTM revenue at Sensata, run as one process instead of two.

WEEK 4

Stand up the recurring cross-functional cadence

Institute the Design, Engineering, Brand, and Sales alignment cadence the posting asks for, and automate the first recurring market or competitive pull with an AI agent, the same habit keeping my own reporting moving at Applied Materials today.

Why this fast: the earlier the cadence exists, the sooner the next launch avoids the same handoff gap found in Week 1.

CLOSE

You are hiring someone to run pricing, portfolio, and positioning as one decision for Fitbit's hardware and accessory line. I have already run that combined decision, and put a number on each half.

The pricing and portfolio half: **$700K+ in margin recovered** and distributor margins moved **53% to 61%**, carrying P&L and revenue targets for a multi-$100M Industrial BU at Sensata.

The positioning and GTM half: **$2M+ first-year revenue** from an end-to-end launch across North America and Europe, and **+12% YoY revenue, +8% market share** from competitive price realignment. At Applied Materials I now automate my own recurring market and pricing analysis with agents built on Claude, so the data behind both halves stays current without a lag.
