Hiring Team, Mintive

Your posting wants someone who owns a launch's full arc, narrative to release to follow-through, not someone who inherits a content calendar. At Sensata, I built exactly that for a new sensing-product launch: the positioning, the battlecards and case studies behind it, and the sales content system that gave 50+ reps a story to sell, which moved their win rate 30%. That is the same shape of problem a founding PMM solves at Mintive: there is no existing playbook, so you build the one the team will actually use.

I spent real time inside engineering before I ever wrote a line of customer-facing copy. 30+ structured interviews with OEMs and distributors told me where the technical story and the buyer's actual question diverged, and the positioning that came out of it lifted conversion 15% on priority launches. Governed agent access to company data is a genuinely technical idea to make jargon-free, and that translation work between engineers and buyers is what I have been doing for two years running.

I am agent-native in practice, not just on paper. At Applied Materials I automate my own recurring competitive and market analysis with AI agents built on Claude instead of rebuilding the same report every cycle, the same judgment call your posting describes: knowing which output to trust and which to check. I have also built a product's entire narrative from a blank page before, an AI job-matching platform, positioning, GTM and pricing tiers, with no team and no playbook to hand any of it to.

Agent governance is becoming a category that needs a defining voice right now, and I would rather help write that voice while it is still being formed than inherit it once it is settled. Proof trail at adhi-product-ai.vercel.app/ref/mintive.
