Hiring Team, Cursor

Your posting asks for someone who can turn deeply technical products into stories that resonate with developers, and then carry that narrative through launches, positioning and GTM enablement. I ran that exact loop at Sensata, owning end-to-end GTM for new sensing products across North America and Europe, which turned engineering-heavy capability into $2M+ of first-year revenue, and shipped sales enablement for 50+ reps that lifted win rates 30%.

The technical-to-buyer translation piece is the part I think fits this seat specifically. I ran 30+ interviews with OEMs and distributors to find the real workflows and objections behind a sale, then turned those features into value propositions that lifted conversion 15% on priority launches. At Applied Materials now, I size markets in partnership with Sales and Engineering and build value-based pricing for a fast-growing product line, work that depends on the same comfort with ambiguity and technical detail your posting asks for.

I also built a developer-facing product from scratch. SwipeHire is an AI job-matching platform I shipped zero-to-one in Python, OpenAI's API and React, running competitor teardowns, 8+ A/B tests and 12+ user interviews that lifted activation 25%, the same experiment-driven distribution work your Growth & Distribution section describes. I automate the recurring parts of market and pricing analysis with AI agents built on Claude, which is the habit that keeps a fast-moving GTM function from drowning in manual updates between launches.

I would like to bring that combination of technical fluency and GTM execution to Cursor. Proof trail at adhi-product-ai.vercel.app/ref/cursor.
