PITCH DECK | CURSOR PRODUCT MARKETING MANAGER

Developers do not need more marketing. They need a technical story they would tell their own team. I have already built that translation layer, twice.

GTM, positioning and launch work for technical products, with the pricing and analytics depth to defend the number behind the story.

- **$2M+** first-year revenue from an end-to-end GTM launch on a technical product
- **30+** OEM and distributor interviews turned into launch-ready positioning
- **50+** reps enabled, +30% win rate from sales enablement built from scratch
- **SwipeHire:** an AI developer product shipped zero-to-one, 25% activation lift
- **Claude AI agents** automating recurring market and pricing analysis today

WHY THIS DECK EXISTS

A technical product does not sell itself. It needs someone who can sit in the code and the go-to-market room on the same day.

What a developer-tools PMM role runs into

The product is genuinely complex, so positioning written without real technical intuition reads as marketing fluff to the exact audience it is meant to win.

Launches, GTM enablement and growth experiments all need the same narrative to hold, across blog posts, sales materials and community content, without drifting between teams.

A fast-moving, ambiguous environment means the PMM has to push back on product thinking, not just translate decisions made elsewhere.

What I have already run, at comparable scale

At **Sensata**, I owned end-to-end GTM for new sensing products, a genuinely technical category, turning engineering capability into $2M+ of first-year revenue.

I ran 30+ interviews with OEMs and distributors to find the real workflows behind a sale, then built the sales enablement that lifted win rates 30% for 50+ reps.

I built my own developer-facing AI product, **SwipeHire**, from PRD to shipped, running the experiments that grew it.

This req asks for someone who translates technical products into developer stories, owns launches end to end, and runs growth experiments. That is the same loop above, run on an engineering-heavy product and on a product I built myself.

THE REQ, MAPPED

What the Product Marketing Manager opening asks for, and where the proof sits.

What the role covers

> *"Turn complex AI + developer workflows into simple, compelling narratives."*

> *"Own end-to-end go-to-market strategy for new features and major releases."*

> *"Identify and test new channels to reach developers... run experiments to improve conversion across the funnel."*

My Proof

Sensata GTM: owned positioning, pricing, channel and launch for new sensing products end to end, driving $2M+ first-year revenue on a technical product line.

Technical-to-buyer translation: 30+ interviews with OEMs and distributors turned into value propositions that lifted conversion 15% on priority launches.

SwipeHire: shipped an AI job-matching platform zero-to-one, then ran 8+ A/B tests and 12+ user interviews that lifted activation 25%, the exact experiment loop this req asks for.

Claude AI agents: automate recurring market and pricing analysis at Applied Materials today, the same technical fluency this seat needs.

THE SENSATA PROOF, IN DEPTH

A technical launch, owned end to end: positioning, pricing, channel and enablement, not just a press release.

Owned go-to-market for new sensing products across North America and Europe: positioning, pricing, channel strategy and launch execution, on a genuinely technical category sold to OEMs and distributors.

$2M+

First-Year Revenue

The result of owning the full GTM motion, not just writing the launch copy.

30+

OEM & Distributor Interviews

The source material for a positioning narrative that actually matched how buyers talk about the product.

+30%

Win Rate from Sales Enablement

Built for 50+ reps, so the technical narrative held consistently outside the room I was in.

The same muscle runs SwipeHire: an AI job-matching platform I shipped zero-to-one, then grew with 8+ A/B tests and 12+ user interviews that lifted activation 25%, the channel-testing and conversion-experiment work this req lists under Growth and Distribution.

FIRST 30 DAYS

What the first month on Cursor's product marketing team looks like.

WEEK 1

Learn the product like a power user

Sit with Product, Engineering and Developer Relations to understand the current feature set, the competitive landscape, and where today's positioning already resonates with developers versus where it reads generic.

Why first: the same move that made the Sensata launches land, talk to the people closest to the product before writing anything.

WEEK 2-3

Ship the first narrative

Pair with Developer Relations on one piece of high-signal technical content, a guide or comparison, and test it against real developer feedback before the next release.

Why now: content tested with real users, not written in a vacuum, is what made the SwipeHire activation gain hold.

WEEK 4

Run the first growth experiment

Pick one channel or onboarding step and run a structured test, the same experiment discipline that grew SwipeHire's activation 25%, now applied to a live Cursor funnel.

Why this fast: a PMM earns product and GTM trust by shipping something measurable, not by presenting a plan.

CLOSE

You are hiring someone to make a technical product sound like something developers want to use. I have already done that, on a harder product.

The core proof is Sensata: **$2M+ first-year revenue** from an end-to-end GTM launch on a genuinely technical product, built on 30+ real buyer interviews and sales enablement that lifted win rates 30% for 50+ reps.

What is harder to find is someone who has also built the product side of that story: **SwipeHire**, an AI developer tool shipped zero-to-one and grown through real experiments, plus the pricing and analytics depth I run today at Applied Materials with Claude AI agents already in the workflow.
