Hiring Team, Stripe

Your Pricing Strategy team's work, blending financial analysis, stakeholder engagement and operational rigor to price products and evaluate their performance as they evolve, is the exact combination I have built a career and a company around. At Sensata I built the FY2026 Bleeders & Leakers Power BI dashboard, ranking 1,200 pricing opportunities against a $627M target, and used the financial model inside it to recover $700K+ in margin in two quarters and lift distributor margins from 53% to 61%.

The cross-functional alignment side of this role is not new to me either. I drove alignment with senior executives on AP26 revenue models and multimillion-dollar customer quotes at Sensata, and at PriceKeel I now build the pricing governance layer as the product itself: a guardrail engine and audit trail that bring the same structure and consistency to recurring pricing decisions that your req asks a Pricing Strategist to bring to Stripe's process.

What I think fits this seat specifically is the comfort with ambiguity and the roll-up-your-sleeves mindset. I carry P&L and revenue targets at every stop, so a pricing recommendation is never separated from the number it has to move, and I build competitive, value-based pricing at Applied Materials today while automating the recurring parts of that analysis with AI agents built on Claude, the scalable-tooling habit your req lists as a way to help the team work more efficiently.

I would like to bring that combination of financial modeling and cross-functional execution to Stripe's Pricing Strategy team. Proof trail at adhi-pricing-ai.vercel.app/ref/stripe.
