PITCH DECK | STRIPE PRICING STRATEGIST

Pricing Strategy work lives or dies on the financial model behind it and the alignment across Finance, Legal, Product and GTM that gets it to execution. I run both halves.

Financial modeling, pricing and packaging strategy, and the operational rigor to make a recurring process scale.

- **$700K+** in margin recovered in 2 quarters via a financial-model-driven pricing program
- **53% to 61%** distributor margin lift through repricing
- **$627M** pricing opportunity dashboard, built from scratch, $433M in gaps surfaced
- **Guardrail engine + audit trail** for pricing governance, built as a company at PriceKeel
- **Claude AI agents** automating recurring pricing analysis today

WHY THIS DECK EXISTS

A Pricing Strategy team does not lack pricing questions. It lacks the financial model and the cross-functional alignment to turn one into execution.

What a cross-functional pricing function runs into

A pricing recommendation is only as good as the financial model behind it: the impact on revenue, margin and user behavior has to be defensible before Finance, Legal, Product and GTM will align on it.

Pricing products as they evolve means the team's own process has to scale too, with consistent, visible, repeatable work instead of a one-off analysis each time.

Stakeholder engagement is the actual bottleneck more often than the analysis itself: driving alignment across functions on a commercially visible decision takes real operational rigor.

What I have already run, at comparable scale

At **Sensata**, I built the Bleeders and Leakers Power BI dashboard: a financial model ranking 1,200 opportunities against a $627M target, recovering $700K+ in two quarters.

I drove alignment with **senior executives** on AP26 revenue models and multimillion-dollar customer quotes, the same cross-functional execution this req asks for.

At **PriceKeel**, I built the scalable process itself: a guardrail engine and audit trail that bring structure and consistency to recurring pricing decisions.

This req asks for financial modeling, cross-functional alignment, and scalable tools and processes for a Pricing Strategy team. That is the exact loop above, run on an industrial book of business and inside a pricing-native company.

THE REQ, MAPPED

What the Pricing Strategist opening asks for, and where the proof sits.

What the role covers

> *"Drive alignment across Finance, Legal, Product, and Go-to-Market stakeholders on pricing proposals and bring them to execution."*

> *"Leverage internal and research data to build financial models to evaluate the impact of pricing changes on revenue, margin, and user behavior."*

> *"Contribute to scalable tools and processes that help the Pricing Strategy team work more consistently and efficiently."*

My Proof

Bleeders and Leakers dashboard at Sensata: a financial model turning 1,200 pricing opportunities into $433M in margin gaps surfaced and $700K+ recovered.

Cross-functional alignment: AP26 revenue models and multimillion-dollar customer quotes carried with senior executives, the same Finance/Legal/Product/GTM pull this req describes.

PriceKeel's guardrail engine: the scalable-process half of this req, solved as a company: an audit trail that makes recurring pricing decisions consistent and defensible.

Claude AI agents: automate recurring pricing analysis at Applied Materials today, the same tooling discipline this req wants brought to Stripe's team.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: a financial model that turned into a number leadership acted on.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution.

$433M

Margin Gaps Surfaced

The model's job: evaluate the revenue and margin impact of every pricing opportunity in one view.

$700K+

Margin Recovered in 2 Quarters

Closed through alignment with Sales and Finance, grounded in competitive gaps and willingness to pay.

53% to 61%

Distributor Margin Lift

Repricing executed and brought to Finance and leadership for sign-off, not just modeled.

The same role carried AP26 revenue models and multimillion-dollar customer quotes alongside senior executives. The common thread: every case started as a financial model and ended in cross-functional execution.

FIRST 30 DAYS

What the first month on Stripe's Pricing Strategy team looks like.

WEEK 1

Learn how a pricing decision moves today

Sit with Product, Finance, Legal and Go-to-Market to map how a recent pricing proposal moved from insight to execution, and where the process already has structure versus where it is still ad hoc.

Why first: the same move that started the PriceKeel audit trail, map what is missing before building anything new.

WEEK 2-3

Build the first financial model

Take one live pricing or packaging question and build the model evaluating its revenue, margin and user-behavior impact, pressure-tested with Finance and Product before it reaches a proposal.

Why now: building it against a real question, not in a vacuum, is what made the 53% to 61% distributor gain at Sensata hold.

WEEK 4

Ship a scalable process piece

Turn the most recurring, least consistent step in that process into a tool or template the team can reuse, so the next pricing proposal starts from structure instead of a blank page.

Why this fast: a Pricing Strategy function only scales once a second person can run the model without you in the room.

CLOSE

You are hiring someone to turn a pricing question into a financial model and cross-functional execution. I have already run that loop at comparable scale.

The core proof is Sensata: **$700K+ recovered in 2 quarters** and a **53% to 61% distributor margin lift**, both run through a financial model built from scratch into a $627M-opportunity Power BI dashboard, with alignment carried to senior executives.

What is harder to find is someone who has also built the scalable-process half of this req as a company: at **PriceKeel**, the guardrail engine and Finance-reviewable audit trail solve the exact consistency problem a growing Pricing Strategy team runs into, and at Applied Materials today that same discipline runs on Claude AI agents.
