Hiring Team, Glean

The KPI frameworks I built in SQL and GA4 at Sensata covered 50,000+ connected devices, and the point was never the dashboard, it was finding the handful of cohorts worth chasing. That work lifted feature adoption 18%, which is the same measurement discipline your posting describes as building an experimentation and measurement culture around activation, retention and expansion.

Your posting also asks for someone who holds product craft standards in onboarding and adoption flows, not just strategy. I wrote the PRD and scoped SwipeHire's MVP zero-to-one, then ran 8+ onboarding experiments on its activation flow that lifted first-session activation 25% for its first 50+ users. Before that I ran 30+ customer interviews at Sensata that surfaced onboarding friction and raised CSAT 22%. Strategy and execution have never been separate jobs for me.

The off-surface and lifecycle piece is familiar territory too. At Plug Power I turned a manual WordPress lead flow into an automated Pardot lifecycle-messaging engine that cut cost per lead 50%, the same notifications-and-nurture mechanic your platform-capabilities list names as referrals, invitations and lifecycle messaging. At Applied Materials I build Claude AI agents to automate the repetitive side of my own forecasting, so I show up already fluent in the kind of AI tooling Glean's product is built on, not as a side interest but as part of how I already work.

I would welcome the chance to walk through this growth-loop work in more detail, AI exercise included. Proof trail at adhi-growth-ai.vercel.app/ref/glean.
