Hiring Team, Signal Labs

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a $627M target across 3 regions, with pipeline funnel, regional scorecards, win rate and stage distribution all in one view, and it surfaced $433M in margin gaps that leadership could actually act on. That is the exact job your posting describes for the BI team: not a report that gets read once, but a data-driven view of the business that holds every function accountable to the same number.

The operating cadence side of the role is not new to me either. I ran leadership decks and OKRs with weekly and quarterly business reviews at Sensata and Applied Materials, carrying P&L and revenue targets at both, and I partnered directly with senior executives on AP26 revenue models and site-transition strategy for a multi-$100M business unit, the kind of ambiguity-to-a-number work a founder's Chief of Staff gets handed daily. Right now I run that same discipline for my own company: I set up PriceKeel's CRM, CPQ, forecast reviews and deal approvals from a blank page, so I know what it takes to build cadence and accountability where none existed before, not just maintain one that is already running.

The founder angle is not theoretical. I am building PriceKeel, a B2B SaaS deal-pricing company, while raising its first round, and before that I shipped SwipeHire solo, an AI job-matching platform, from a blank page to 50+ early users. Stepping into ambiguity and turning it into a plan is how I already spend my week; a profitable, fast-growing company that wants a Chief of Staff who can run its BI team and its forecasting at the same time is a direct match for that habit.

I would welcome the chance to talk through how the Bleeders and Leakers build and the PriceKeel operating cadence map onto Signal Labs' next quarter. Proof trail at adhithyabhaskar.vercel.app/ref/signal-labs.
