Hiring Team, NewsBreak

Your posting asks for someone who understands local advertiser economics well enough to set pricing and monetization models that work for both the business and the advertiser. At Pixis I carried P&L and revenue targets across an 8-client, $15K-$90K-per-month portfolio, and the budget constraints, seasonality and return-on-spend tradeoffs I managed there are the same math a local advertiser runs before deciding where to put next month's marketing dollars. I cut churn 50% on that book by building account strategy and service-category playbooks around what actually moved an advertiser's outcomes, not just impressions.

The measurement half of your role, connecting campaign reporting to real business outcomes, is where I have spent the most hours. At Sensata I built the SQL and GA4 KPI frameworks behind a 50K-device install base, using them to diagnose performance problems and surface the cohorts worth acting on, work that lifted feature adoption 18% and qualified leads 35%. At Plug Power I automated the CRM and lead-flow pipeline end to end (WordPress, Pardot, Salesforce, GA) so campaign creation, budgets and conversion tracking fed one closed-loop report instead of three disconnected ones, cutting cost per lead 50% in the process.

I also know what it takes to turn an ambiguous product area into a shipped roadmap with Engineering, Design and Data Science in the room. I own the 100+ feature backlog at Sensata end to end, across 3 regions, and I automate the recurring analysis behind every roadmap call at Applied Materials with AI agents built on Claude, the same AI-forward habit your team is building into local discovery and campaign creation. Pair that with running performance advertising and retail media (Amazon Ads, Criteo) across international markets at Pixis, and I can get underneath a local advertiser's economics fast.
