Hiring Team, Samsung Semiconductor

Your posting asks for someone who can turn customer demand and forecasts into a pricing decision and then hand Sales the insight to negotiate it. That is the loop I run today: at Applied Materials I size a fast-growing semiconductor market with Sales, Engineering and Accounts, then build the value-based pricing and forecasting models that keep the go-to-market plan in step with demand before a product reaches the field.

At Sensata I ran the pricing half of that same loop: benchmarked 10+ competitors to model market share and realign pricing, moving revenue 12% and share 8 points on a multi-$100M Industrial BU, then built the multimillion-dollar customer quotes that closed with senior executives in the room. Before that I owned go-to-market end to end for a new sensing product line through OEM and distributor accounts, and built the sales enablement and customer-facing case studies that took a 50-rep team's win rate up 30%.

DRAM runs on the same dynamics I already work in: a demand curve that moves fast, a pricing call that has to hold up by customer and segment, and a sales team that needs the analysis distilled into one message before it walks into a negotiation. I would bring that read-the-market-then-arm-sales loop to the DRAM team, along with the habit of running it cross-functionally, which is exactly how I work with Sales, Engineering and Accounts at Applied Materials today.
