PITCH DECK | SAMSUNG SEMICONDUCTOR PRODUCT MARKETING MANAGER, DRAM

The DRAM team needs one person turning customer demand, forecasts and competitive share into a pricing call Sales can defend, and a supply signal Engineering can plan around. I run that exact loop today.

Market sizing, value-based pricing and competitive benchmarking, run cross-functionally with Sales, Engineering and Accounts, on one resume.

- **10+-player benchmarking** behind a 12% YoY revenue, 8-point share swing at Sensata
- **Multimillion-dollar customer quotes** built with senior executives to arm Sales for negotiation
- **Semiconductor market sizing** with Sales, Engineering and Accounts at Applied Materials today
- **+30% win rate** from a sales-enablement system built for 50+ reps
- **AI agents built on Claude** automating recurring market and competitive analysis

WHY THIS DECK EXISTS

The DRAM mandate is not "track the market." It is turning a demand signal into a pricing decision and a supply plan, before the negotiation starts.

What that actually requires

Segment demand and TAM read closely enough to catch a gap before a competitor does, not a quarterly report that arrives after the decision window closes.

A pricing strategy that holds up customer by customer and segment by segment, fed by field feedback, not a single list price applied everywhere.

A distilled, one-message version of the analysis, built for a sales conversation and a cross-functional planning meeting with HQ, not a 40-slide report nobody opens twice.

What I have already run

At **Applied Materials**, I size a semiconductor market with Sales, Engineering and Accounts in the room, turning field input into one forecast the group plans against.

At **Sensata**, I benchmarked 10+ competitors to model market share and realign pricing by segment, moving revenue 12% and share 8 points on a multi-$100M business.

At **Sensata** again, I built the multimillion-dollar customer quotes that armed Sales to close with senior executives already in the room.

The through-line: every pricing or forecasting model I have built was designed to get used in the next negotiation, not filed after the next review.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Track customer and market trends, identify gaps and opportunities, and analyze segment demand and TAM."*

> *"Develop pricing strategies by customer and segment, using feedback from the field to finalize decisions."*

> *"Distill analyst reports into key messages and model competitive TAM, SAM and market share."*

> *"Partner with technical teams to build positioning and data-backed analysis that sharpens our competitive edge."*

My proof

Applied Materials, segment demand and TAM: sizes a fast-growing semiconductor market with Sales, Engineering and Accounts, feeding a forecast across multiple product groups.

Sensata, pricing by segment: realigned pricing off field feedback and 10+-player benchmarking, moving revenue 12% and share 8 points.

Sensata, competitive share modeling: a $627M-target, 1,200-opportunity pricing dashboard that surfaced $433M in margin gaps for leadership to prioritize.

Sensata, technical partnership: built multimillion-dollar customer quotes and sales enablement with technical teams, lifting a 50-rep team's win rate 30%.

THE PROOF, IN DEPTH

Read the segment, reprice it, then put a number Sales can use on it.

The same three-step pattern across two companies: size the demand and the competitive field, turn that into a pricing or quote decision, then measure whether it moved a number the business was accountable for.

+12% Revenue, +8% Share

10+-Player Competitive Benchmarking

Fed a segment-level pricing realignment across a multi-$100M Industrial BU at Sensata.

$627M Target

1,200-Opportunity Pricing Dashboard

Tracked across 3 regions and 20 product lines, surfacing $433M in margin gaps for leadership.

+30% Win Rate

Sales-Enablement System, 50+ Reps

Customer quotes, battlecards and case studies built with technical teams at Sensata.

At Applied Materials that same loop runs today: market sizing and value-based pricing with Sales, Engineering and Accounts, with AI agents built on Claude automating the recurring analysis underneath it.

FIRST 30 DAYS

What the first month on the DRAM team looks like.

WEEK 1

Map segment demand and the competitive TAM/SAM

Build the first customer and segment demand read, distilling analyst reports and field input into one TAM/SAM/share model, the same first move behind the 10+-player benchmarking at Sensata.

Why first: every pricing or supply call downstream depends on this model being right before anyone negotiates off it.

WEEK 2-3

Turn the model into a pricing-by-segment call

Work field feedback into customer- and segment-level pricing decisions and the quotes and data Sales needs to negotiate, the same build that moved Sensata's revenue 12% and share 8 points.

Why now: a model nobody can negotiate off of is just a report.

WEEK 4

Stand up the recurring forecast-to-pricing loop

Institute the cross-functional cadence with Sales, Engineering, Accounts and HQ behind the Applied Materials model, then automate the recurring analysis with an AI agent so the loop refreshes every cycle instead of every negotiation.

Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.

CLOSE

Samsung DRAM needs the market-read-to-pricing loop run with Sales, Engineering and HQ in the room. I already run that loop, with a number on each step.

The read-the-market half: **semiconductor market sizing** with Sales, Engineering and Accounts at Applied Materials, plus the forecasting models that keep multiple product groups in step with demand.

The pricing-and-sales half: **10+-player competitive benchmarking** behind a 12% YoY revenue and 8-point share move at Sensata, and the multimillion-dollar customer quotes and sales enablement that took a 50-rep team's win rate up 30%. I automate the recurring analysis underneath all of it with AI agents built on Claude.
