Hiring Team, ScaleAI

At Sensata I owned the go-to-market for a new sensing product line across North America and Europe: positioning, pricing, channel and launch in one motion, and it closed its first year at \$2M+ in revenue. That is close to the job your posting describes: turn an offering with real technical depth into messaging that lands with a buyer who is not an engineer, tailored to the vertical that buyer sits in.

The other half of the role is arming the people who actually sell it. I built the sales-enablement decks and case studies that 50+ reps carried into the field, and win rates moved 30% because the material matched what a rep needed mid-conversation, not what marketing wanted to say. I ran 30+ interviews with OEMs and distributors before I wrote a word of that material, so the case studies argued the point a customer actually cared about, which is the same discipline your Customer Advisory Board and customer-marketing work is built on.

At Applied Materials I sit at the same intersection your posting describes: Sales, Engineering and Accounts feeding one market view for a fast-moving vertical, and I automate the recurring analysis behind that view with AI agents built on Claude, so the time goes into the positioning work instead of the spreadsheet. That is the intuition for AI-native products your posting asks for, built from inside one.

I would bring that same pattern, take a technical offering, find the language that moves a vertical buyer, arm the reps who close it, to Scale's applications business. Proof trail at adhi-product-ai.vercel.app/ref/scale-ai.
