Hiring Team, Amazon Web Services (AWS)

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a \$627M target by win rate, average dollar per win and pipeline stage, broken out by salesperson and by product line. That dashboard carried the weekly and quarterly business reviews and surfaced \$433M in margin gaps for leadership to prioritize. Standardizing sales processes and maintaining pipeline attribution for a specialist and partner org is the same discipline, run on different numbers.

The CRM, forecasting and variable-compensation systems your posting names are also the operational core I run today. At PriceKeel, the company I founded, I built and run the CRM and CPQ, the forecast and pipeline reviews, and the deal approvals myself, with an audit trail Finance can check against the deal data directly. At Sensata I raised distributor margins from 53% to 61% and recovered \$700K+ in margin in two quarters by rebuilding the pricing logic behind escalations, not just resolving the one deal in front of me.

The AI-human collaboration in your posting is already how I work. I automate the repetitive parts of my own forecasting and market-sizing analysis with Claude agents at Applied Materials, and at Sensata I built the enablement content that got 50-plus reps actually using a new process, not just trained on one. Getting a sales org to adopt a standardized process is harder than designing it, and it is the half I have already done.
