Hiring Team, DoorDash

At Sensata I repriced how a multi-\$100M Industrial BU charged for the parts moving through distribution, raising channel-partner margins from 53% to 61% in under two quarters and recovering \$700K+ in margin along the way. That is the same economics judgment this role asks for on In-Store payment terms: find where the transaction-level numbers are wrong, then fix the pricing logic behind them, not just the one deal in front of you.

The autonomous, cross-functional part is familiar too. I run PriceKeel's CRM, CPQ, forecasting and deal approvals myself end to end, and at Sensata I built the FY2026 Bleeders and Leakers program from a blank page: 1,200 pricing opportunities modeled against a \$627M target, with the dashboard that let leadership see \$433M in margin gaps by product line and act on them. Owning a strategy project from the first data pull to the executive readout, with minimal oversight, is the day-to-day I already run.

I also carry P&L and revenue targets at Applied Materials today, sizing the semiconductor market with Sales, Engineering and Accounts so the pricing we ship matches where demand is actually moving. Payments economics change the same way: fast, and ahead of anyone's intuition about them.
