Hiring Team, Meta

At Sensata I benchmarked 10+ competitors across multiple data sources to realign pricing, driving +8% market share, and led a 5-consultant team at Simon Vision Consulting that triangulated 150+ facility-level data points into a SAM of 28 for Safran. Both projects started with imperfect, scattered signal and ended in a number leadership could act on, the same synthesis your Competitive Intelligence org runs at a larger scale.

The applied statistics side runs deep too: I use SQL, Python and regression to turn messy, multi-source market data into decisions, and I built the FY2026 Bleeders and Leakers dashboard that surfaced \$433M in margin gaps by triangulating pricing signal across 3 regions and 20 product lines. Five years of turning ambiguous market signal into a number an executive team actually used is the habit I would bring to this org.

I also automate the repetitive side of that research with AI agents built on Claude at Applied Materials today, orchestrating recurring analysis cycles the way this role's AI-powered tooling asks for.
