Hiring Team, San Francisco Compute

Running PriceKeel alone means every ambiguous problem becomes mine to structure and close, with no one else to hand it to. I built the CRM, pipeline reviews and deal approvals myself, I am running pilots with early customers, and I am raising the first round in parallel. That is the same 0-to-1 operating pattern this role describes: translate a priority that is still taking shape into a plan, then follow it through without needing direction.

The technical fluency your posting asks for runs through my current role too. At Applied Materials I turn weekly input from Sales, Engineering and Accounts on semiconductor infrastructure into one market-sizing view, carrying P&L targets while running the OKR cadence behind leadership reviews. At Sensata I built a Power BI dashboard tracking 1,200 pricing opportunities against a \$627M target, then used it to run the program that recovered \$700K+ in margin in two quarters, working directly with senior executives on revenue models and site-transition strategy under genuine ambiguity about where the number would land.

I have also represented that kind of office externally before it existed as a formal title. On a pro-bono engagement for Safran, I led a 5-consultant team that sized a market down from 170 facilities to a SAM of 28 and presented the recommendation to Safran's leadership directly, the same external-facing trust this role extends on the CEO's behalf.
