Hiring Team, Gusto

Your posting says the HI Sales Ops team turns fragmented processes into scalable, repeatable systems, and that is the job I already run at PriceKeel: I own the company's CRM and CPQ, its forecast and pipeline reviews, and its deal approvals, with an audit trail Finance can actually check. Nobody handed me that system to clean up; I built it from a blank screen, which is the harder version of the same ask.

The analytics half of the role maps directly to a dashboard I already shipped. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard, tracking 1,200 pipeline opportunities against a $627M target across 3 regions, with pipeline funnel, win rate, stage distribution and rep-level detail surfaced by salesperson. That dashboard is where $433M in margin gaps got found, and where I turned the findings into a 2-quarter program that recovered $700K+ and moved distributor margins from 53% to 61%. Own the metric definitions, and the rest of the forecast cadence gets a lot easier to trust.

On the "Drive AI Strategy for Sales" half of the posting, I am not evaluating AI from the sidelines. I automate repetitive sales and revenue analysis with Claude AI agents at Applied Materials, checking every agentic output before it reaches a forecast. I also built an AI product end to end at SwipeHire, from PRD to MVP to 50+ onboarded users, which is the build-and-ship muscle this role asks for when it talks about prototyping copilots and automation rather than just reading about them.

Happy to walk through the dashboard and the CRM/CPQ build live. Proof trail at adhithyabhaskar.vercel.app/ref/gusto.
