Hiring Team, Socure

Your posting for the proactive identity-notification line reads less like a typical product-manager req and more like a founder brief: define what good looks like, set the evidence bar for every data source you consider, and get the first version priced and launched. That is the exact shape of work I do every day at PriceKeel, the decision-integrity layer I founded for B2B SaaS deal pricing. I designed the guardrail engine that decides which signals earn a seat in a pricing decision, built the audit trail that proves it to Finance, and built the CRM, CPQ and deal-approval flow underneath it, end to end from zero.

The data-source discipline in your posting, deciding what a candidate source has to prove before it earns a place in the product, is the same judgment I built into PriceKeel's guardrail engine, and the same one I ran at Sensata negotiating margin back from distributors by testing claims against real willingness-to-pay data rather than headline numbers. On the measurement side, I built the FY2026 Bleeders and Leakers Power BI dashboard at Sensata: 1,200 pricing opportunities scored against a \$627M target across 3 regions and 20 product lines, with the KPI framework (win rate, average dollar per win, stage distribution) that surfaced \$433M in margin gaps for leadership to prioritize. That is the same coverage-precision-recency instinct your notification product needs instrumented from day one.

Commercialization is where I would want to spend the first 30 days. At Sensata I owned pricing, packaging and commercial terms for the Industrial business unit; at PriceKeel I set the commercial model myself and am running pilots and raising the company's first round right now. I have also already modeled a subscription product's pricing tiers from scratch, SwipeHire's three-tier plan, benchmarked against competitors and willingness-to-pay signals rather than guessed at. Pairing that commercial instinct with your Data Partnerships team's sourcing work is exactly the kind of handoff I would want to own.

I would welcome the chance to walk through how the PriceKeel guardrail engine's evidence bar maps onto your data-source strategy, and how the Sensata dashboard work maps onto the KPIs this product line will need. Proof trail at adhi-product-ai.vercel.app/ref/socure.
