Hiring Team, Infineon Technologies

Your posting asks for someone who can evaluate market opportunity, build the business case and keep value-based pricing ahead of a fast-moving product line. I do exactly that today at Applied Materials: I size the semiconductor market with Sales, Engineering and Accounts, then build the competitive, value-based pricing that forecasts where the market is headed across multiple product groups, not where it already was. It is the same mechanics this role is asking for, pointed at specialty memory instead of equipment.

The full-lifecycle ownership is familiar territory too. At Sensata I owned a new sensing-hardware line end to end, market evaluation, positioning, launch, and the post-launch optimization that follows a release, closing the year at $2M+ in first-year revenue. That meant sitting with Engineering on next-generation product definition, running 30+ customer interviews with OEMs and distributors to find what actually drove adoption, and writing the sales enablement 50+ reps carried into the field. Coordinating a globally diverse set of functions toward one launch, instead of several competing ones, is the discipline I bring to any product family.

What I bring to a memory product's technical story is the translation work that turns deep technical detail into a business case a sales team and a customer can both act on, the same discipline behind the $700K+ in margin I recovered for a multi-$100M Industrial BU by repricing against competitive and willingness-to-pay data.

Specialty memory products in automotive, industrial and data-center markets are the kind of portfolio where a pricing call and a positioning call are really the same decision made twice. I would rather make that case directly than from a resume line. Proof trail at adhi-product.vercel.app/ref/infineon-technologies. Happy to talk whenever works on your side.
