Hiring Team, Instrumental

Your posting says the person in this seat earns decision-making authority as they learn the product, pricing and legal intricacies well enough to run the deal desk on their own. I built that authority once already: at Sensata I ran the Bleeders and Leakers program end to end, negotiating against competitive gaps and customer willingness to pay to recover \$700K in margin in two quarters, on a multi-\$100M industrial business where every quote went to senior executives before it went to the customer.

The "build the function while building the business" part of the role is the part I am already doing. PriceKeel is a decision-integrity layer for B2B SaaS deal pricing: I designed the guardrail engine that recommends a discount boundary from a company's own closed-won and closed-lost deals, and built the audit trail that gives Finance evidence behind every pricing decision, the record a Finance handoff needs to invoice on time. That is a deal-desk playbook, an approval threshold and a piece of automation, built from the ground up and sold against legacy CPQ tooling to RevOps, Sales leadership and Finance.

I also know what it is to be the small fish setting terms with a much bigger buyer. The Bleeders and Leakers dashboard I built tracked 1,200 pricing opportunities against a \$627M target across three regions and twenty product lines, and surfaced \$433M in margin gaps that I had to prioritize and defend to leadership, line by line, account by account. That same instinct, find the resolution that keeps the deal moving without giving up margin, is what nonstandard arrangements and nonstandard customers require.
