Hiring Team, Habitat Health

Habitat Health is asking one person to own strategy, roadmap and delivery across a full application portfolio: EHR, CRM, Call Platform, Risk Suspecting and the rest of it. That is close to what I ran at Sensata, where I owned a 100+ feature backlog against a structured prioritization framework, working with engineering in Agile across 3 regions, cutting time to market 20% while speeding releases 25%.

The posting is specific that discovery means talking to clinical, growth and operational stakeholders directly, not working off an intake queue. That is the same discipline I used at Sensata: 30+ stakeholder interviews with OEMs and distributors that reset the roadmap around real workflow pain points instead of the loudest voice, which raised CSAT 22%. I wrote the requirements and positioning that came out of those interviews myself, then tracked adoption in SQL and GA4 after each release so the next quarter's roadmap was built on usage data, not guesses.

Coordinating several vendor teams against one delivery plan is its own skill, separate from writing the requirements. At Plug Power I automated and ran a Mar-Tech stack spanning four vendor platforms (Salesforce, Adobe Analytics, GA, Google Tag Manager) into one closed-loop reporting system, and at Applied Materials I am building Claude AI agents to take the repetitive half of that work off my own plate so the judgment calls get more attention, not less.

Habitat is scaling a PACE model backed by Kaiser Permanente and New Enterprise Associates at a point where the application portfolio has to keep pace with that growth. I would like 20 minutes to walk through how I would sequence the first two quarters of that roadmap. Proof trail at adhi-product.vercel.app/ref/habitat-health.
