

PITCH DECK | VISA MANAGER, MARKETING STRATEGY & PORTFOLIO PLANNING

North America Marketing needs one honest view across three businesses. I have already built that exact model for a \$627M portfolio.

Portfolio planning, investment prioritization and executive decision support, translated from industrial pricing and semiconductor strategy into a Marketing investment portfolio.

\$627M target, 1,200 opportunities ranked, 3 regions, Sensata

\$433M in margin gaps surfaced for leadership prioritization

170 to 28 facilities sized into a SAM, 4 verticals, Safran

+12% YoY revenue, +8% share from competitive-led repricing

Claude AI agents automate recurring portfolio analysis, Applied Materials

North America Marketing is three businesses, Consumer, B2B and Marketing Services, competing for one investment budget.

What a three-business portfolio runs into

Consumer, B2B and Marketing Services each generate their own initiatives, forecasts and asks. Without one holistic view, the loudest initiative wins the budget instead of the strongest one.

Annual and multi-year planning cycles need a repeatable way to prioritize investment, not a fresh argument every cycle between three teams with three different scorecards.

The fix is not one great analysis. It is a standing way to size the opportunity, rank it against the others, and turn that ranking into a business case leadership can act on fast.

What I have already run, in two other industries

At **Sensata**, I built the FY2026 Bleeders and Leakers dashboard: 1,200 pricing opportunities ranked against a \$627M target across 3 regions and 4 product families, with \$433M in margin gaps surfaced for leadership to prioritize.

At **Safran**, I led a 5-consultant team that sized 170 facilities into a SAM of 28 across 4 verticals, then presented the market-entry case directly to leadership for a go or no-go call.

I am running the same discipline now at **Applied Materials**, turning fragmented Sales, Engineering and Accounts input into one market view, with recurring analysis automated through Claude AI agents.

A Manager who maintains a comprehensive view of the Marketing portfolio and helps leadership prioritize investment across three businesses is describing this exact loop: size the opportunity, rank it, build the case, repeat it every planning cycle.

What the Marketing Strategy & Portfolio Planning opening asks for, and where the proof sits.

What the role covers

- "Own and maintain a comprehensive view of Visa North America's Marketing portfolio, including strategic priorities, investment allocation... and expected outcomes."*
- "Develop frameworks and approaches that help leadership prioritize resources and make informed investment decisions."*
- "Identify opportunities to leverage AI and emerging technologies to improve planning, decision-making, operational efficiency."*

My Proof

- Sensata Bleeders and Leakers dashboard:** ranked 1,200 opportunities against a \$627M target across 3 regions, the same regional-prioritization muscle a 3-business Marketing portfolio needs.
- Safran TAM/SAM/SOM engagement:** 170 facilities sized to a SAM of 28 across 4 verticals, a business case built to survive a leadership review.
- Applied Materials today:** partner across Sales, Engineering and Accounts to turn scattered internal data into one market view for investment decisions, recurring analysis run through Claude AI agents.
- Sensata AP26 revenue models:** shaped alongside senior executives, carrying P&L and revenue targets for a multi-\$100M business.

One live portfolio view, ranked against a target: the same structure North America Marketing needs across three businesses.

Built and ran the FY2026 Bleeders and Leakers Power BI dashboard for Sensata's Industrial BU: a live portfolio view ranking pricing opportunities against a \$627M target so leadership could prioritize by region and product line instead of by whoever asked loudest.

1,200

Opportunities Ranked

Every pricing opportunity scored and ranked against the \$627M target, the same portfolio-ranking discipline a multi-business Marketing investment view needs.

\$433M

Margin Gaps Surfaced

Turned the ranked portfolio into a prioritized action list for leadership, by region, product line and salesperson.

3 Regions, 4 Families

Portfolio Sliced for Decisions

Built the pipeline funnel, regional scorecards and win-rate views that let leadership see where to invest next.

The same loop carried the AP26 revenue models and site-transition strategy I shaped with Sensata's senior executives, and it is the loop a Consumer, B2B and Marketing Services portfolio needs run every planning cycle.

What the first month on Marketing Strategy & Portfolio Planning looks like.

WEEK 1 Map the current portfolio Pull the existing view of Consumer, B2B and Marketing Services initiatives, investment allocation and expected outcomes. Sit with the Strategy, Planning and Operations team to hear which analyses actually moved an investment decision last cycle. ----- Why first: the strongest prioritization framework is usually visible in what already worked last cycle, the same move that opened the Sensata dashboard build.	WEEK 2-3 Build the prioritization framework Turn the strongest patterns into a repeatable scoring and ranking approach across the three businesses, then pressure-test it against a real initiative with the Marketing, Product and Analytics teams. ----- Why now: pressure-testing against a real initiative, not a hypothetical one, is what made the Sensata dashboard and the Safran case defensible in front of leadership.	WEEK 4 Support the investment case Package the ranked portfolio into an executive-ready business case for the next planning cycle, with risks, dependencies and AI-efficiency opportunities flagged for leadership to act on. ----- Why this fast: a portfolio view only earns its keep once it drives an actual investment call.
---	---	---

CLOSE

You are hiring someone to keep one honest view of where Marketing's investment is going, across three different businesses. I have already built that exact model, twice, in two other industries.

The core proof is Safran and Sensata together: a **TAM/SAM/SOM model sized from 170 facilities to a SAM of 28** across 4 verticals, and a **\$627M portfolio ranked into 1,200 opportunities** with \$433M in margin gaps surfaced for leadership, both built to survive an executive review.

What carries over directly is the habit itself: turn scattered data into a ranked view, then into a business case a leadership team can act on. **I am running that same loop right now at Applied Materials**, across Sales, Engineering and Accounts, with recurring analysis automated through Claude AI agents, which means the AI-efficiency angle this role is looking for is not something I would need to build from scratch.
