PITCH DECK | GOOGLE GLOBAL STRATEGY AND OPERATIONS MANAGER, YOUTUBE BUSINESS

A global GTM operation needs one accountability framework that works in three regions at once, not a rollup everyone argues over. I have already built that framework and kept it alive past the first review.

Cross-region program ownership, frontline accountability design and executive alignment from someone who builds the framework and runs the cadence behind it, not just one or the other.

- **3 regions, 20 product lines** under one accountability framework, each with its own scorecard
- **$433M** in margin gaps surfaced for leadership to act on, not just review
- **+8% market share** from a benchmarking read turned into an executed GTM recommendation
- **AP26 revenue models** and multimillion-dollar contracting run directly with senior executives
- **8-client partner portfolio** with its own P&L, the service-model side of this seat

WHY THIS DECK EXISTS

A global strategy and operations seat is really two disciplines held by one person: the data that finds the opportunity, and the regional framework that keeps everyone accountable to it.

What losing that discipline runs into

A global program that only ships one rolled-up number does not fail loudly. It fails as a plan every region nods through in one review, then quietly reinterprets locally because no region-level scorecard exists to check progress against.

A business spanning the Americas, EMEA and APAC turns that gap into three different versions of the same initiative within two quarters, each defensible on its own and none comparable to the others.

The fix is not a better global deck. It is a framework that gives every region its own accountability line from day one, so the rollup is a summary, not the only source of truth.

What I have already run

At **Sensata**, I designed the Bleeders and Leakers framework across 3 regions, 4 product families and 20 product lines, giving each region its own scorecard by salesperson and product line instead of one combined number.

I then carried that same discipline into AP26 revenue models and multimillion-dollar contracting directly with senior executives, and into a 10+ competitor benchmark that became an executed GTM recommendation.

At **Applied Materials**, I run the business review cadence, OKRs and quarterly reviews, behind P&L targets across multiple product groups, so the framework stays current past launch.

A manager who owns global go-to-market strategy end to end, builds frontline partner planning and accountability frameworks across regions, and takes ambiguous initiatives from sizing through executive alignment to launch and measurement, is describing this exact loop: structure the ambiguity, build the regional framework, keep every region accountable to it.

THE REQ, MAPPED

What the Global Strategy and Operations Manager opening for YouTube Business asks for, and where the proof already sits.

What the role covers

Own global go-to-market strategy and operations workstreams end to end, from problem definition through launch and impact measurement.

Build and roll out frontline partner planning, goal-setting and accountability frameworks across three regions.

Own ambiguous initiatives from sizing and pilot baselines through executive alignment, global launch and post-launch measurement.

4 years of experience with data analysis and tools such as SQL; strategy and operations or consulting role.

My Proof

Global strategy, problem to measurement: built the FY2026 Bleeders and Leakers framework at Sensata end to end, from sizing a $627M opportunity through launch and the measured recovery it drove.

Frontline planning and accountability across regions: built the regional accountability structure behind that framework across 3 regions and 20 product lines, assigning ownership by salesperson and product line so each region's scorecard moved on its own.

Ambiguous initiatives through executive alignment: carried AP26 revenue models and multimillion-dollar customer quotes through a site transition with no existing playbook, directly with senior executives.

SQL, data analysis, strategy and operations: write the SQL and build the Power BI models myself; run the OKRs and business review cadence at Applied Materials today, with an MS in Marketing Analytics (STEM) behind the analysis.

THE PROOF, IN DEPTH

Bleeders and Leakers: make every region accountable to its own number before leadership sets the next global target.

Built as a framework covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, regional scorecards and win-rate view each region owned on its own cadence, the same regional-accountability loop a three-region partner framework needs.

$433M

Margin Gaps Surfaced

Every gap traced to a specific record by salesperson and product line, so each region could act on its own number instead of debating a combined one.

53% to 61%

Partner Margin Lift

Renegotiated distributor and channel-partner contracting and documented the process so the lift held past the first quarter it was presented in.

+8%

Market Share Gained

10+ competitors benchmarked, then turned into an executed GTM recommendation that also drove +12% YoY revenue alongside it.

That same instinct runs the Applied Materials seat today: align Sales, Engineering and Accounts into one view, then keep the OKRs and quarterly business reviews current so the plan does not go stale after the first meeting.

FIRST 30 DAYS

What the first month inside YouTube Business strategy and operations looks like.

WEEK 1

Map the current partner-planning cadence region by region

Sit with product, engineering, data science and the regional teams in the Americas, EMEA and APAC to learn how creator and partner planning moves today, and shadow one existing regional review end to end before changing anything.

Why first: the same instinct that had me learn Sensata's regional pricing structure before designing a framework on top of it.

WEEK 2-3

Own one ambiguous initiative end to end

Take one creator-service or partner-workflow question, size it, build the baseline, and carry it through executive alignment to a launch plan, the same sizing-to-launch loop that moved the Bleeders and Leakers analysis into an executed program at Sensata.

Why now: the fastest way to earn trust on an unfamiliar business is to ship one complete recommendation, not a slide of open questions.

WEEK 4

Stand up the regional accountability framework

Propose the goal-setting and accountability structure that gives each of the three regions its own scorecard and cadence, mirroring the region-level ownership that made the Bleeders and Leakers margin recovery hold past its first quarter.

Why this fast: a global initiative only earns its keep once every region has a number it owns, not a rolled-up average it can argue with.

CLOSE

You are hiring someone to turn global GTM ambiguity into one accountability framework three regions actually trust. I have already built that framework, from the sizing side and the regional-ownership side.

The core proof is Sensata: a framework tracking **1,200 opportunities across 3 regions and 20 product lines**, $433M in margin gaps surfaced, and a 10+ competitor benchmark that drove **+8% market share**, each backed by a regional scorecard that held past the first review.

What is harder to find is someone who has also run the partner-facing side of a service model: I carried P&L targets for an **8-client partner portfolio** at Pixis, across international markets. The sizing, the regional framework and the partner-service lens are not three separate skills I would need to learn on the job.
