

PITCH DECK | AIRWALLEX PRODUCT MARKETING MANAGER, BUSINESS ACCOUNTS

Business Accounts gets sold on one consistent value proposition, built from real customer, commercial and product input, then enabled for an upmarket sales cycle. I have already run that exact loop once, end to end.

A positioning and enablement track record built for enterprise deal cycles, paired with the cross-functional habit of feeding customer signal straight into the product roadmap.

Sensata GTM - owned positioning, pricing, channel and launch zero-to-one, \$2M+ first-year revenue

50+ reps / +30% - enablement decks and case studies that lifted win rates on upmarket accounts

30+ interviews - qualitative signal checked against SQL and GA4 usage data before it shaped the roadmap

+12% YoY revenue - price-realignment decisions as Pricing Lead, benchmarked across 10+ players

AI agents on Claude - in production use today, Applied Materials

Positioning a suite as broad as Business Accounts is not one message. It is **three audiences agreeing on the same one.**

What that actually requires

A value proposition that customer, commercial and product teams can each repeat the same way, so the pitch does not drift between a spec sheet, a sales deck and a finance buyer's inbox.

Enablement built for upmarket cycles specifically, where the asset has to shorten a multi-stakeholder deal, not just restate the product one more time.

A live channel for qualitative and quantitative signal to reach the roadmap, so global and regional teams adopt the message because the evidence behind it is real.

What I have already built at that exact seam

Owned **GTM end to end** for a new Sensata product line, turning spec-sheet features into one customer value story that lifted conversion 15%, then built the enablement that lifted win rates 30% across 50+ reps.

Ran **30+ structured customer interviews** before writing a line of messaging, then checked that read against SQL and GA4 usage data across 50K+ connected devices before it shipped to the roadmap.

Carried **P&L and revenue targets** across regional and product teams as Pricing Lead, the cross-functional cadence a product suite this broad runs on daily.

The through-line: I have already built the one-message, cross-team, roadmap-feeding loop this role is asking for, just on a different product line.

What the Business Accounts PMM posting asks for, and where the proof already sits.

What the role covers

- "Define, test and refine global product positioning, messaging and value proposition in collaboration with product, sales and marketing teams."*
- "Develop compelling and high-impact enablement assets that equip upmarket sales teams to accelerate deal cycles and win key accounts."*
- "Leverage qualitative and quantitative insights across channels, customers and product to influence and enhance the product roadmap."*

My proof

- Sensata GTM, zero-to-one:** owned positioning, pricing, channel and launch for a brand-new product line end to end, driving \$2M+ in first-year revenue.
- Sales enablement:** decks, battlecards and case studies for 50+ reps that lifted win rates 30% on enterprise OEM and distributor accounts, the exact deal-acceleration job this role names.
- Insight into roadmap:** 30+ customer interviews plus SQL and GA4 usage data across 50K+ devices, feeding the roadmap and lifting adoption 18%.
- Cross-functional cadence:** carried P&L and revenue targets across global and regional teams as Pricing Lead, benchmarked against 10+ competitors.

Sensata: a blank product line to a \$2M+ launch, grounded in the people who had to buy it.

Built as the GTM owner for a brand-new sensing line, positioning, pricing, channel and launch, not handed a positioning brief to execute after the fact.

30+

Structured Customer Interviews

OEM and distributor buyers, heard from before a single line of messaging got written.

50+ / 30%

Reps Enabled / Win-Rate Lift

Decks and case studies that gave upmarket teams one consistent pitch instead of five different ones.

\$2M+ / 15%

First-Year Revenue / Conversion Lift

The result of turning spec-sheet features into customer value language, not the other way around.

The same cross-functional cadence runs through Pricing Lead: a value proposition about a business account only holds up once Finance and Sales both see the same number behind it.

What the first month on the Business Accounts positioning and enablement seat would look like.

WEEK 1

Sit with the buyer, not the brief

Talk to Business Accounts customers, upmarket sales and product to find exactly where the current pitch loses a deal, the same move that grounded the Sensata launch before any deck existed.

Why first: a positioning refresh built on assumptions rather than real deal-cycle friction is the fastest way to miss the account.

WEEK 2-3

Ship the asset reps actually reach for

Build the enablement deck or case study most likely to accelerate the deal cycle fastest, instrumented the way the Sensata enablement was, so it is measured before it scales.

Why now: a library of unused collateral is a worse outcome than one asset a rep actually pulls up mid-call.

WEEK 4

Turn the first proof point into the global update

Use what closed and what reps actually used to refresh positioning across regions, and feed the qualitative plus quantitative signal back into the roadmap conversation.

Why this fast: a global positioning update earns rollout by showing it moved a real deal first.

CLOSE

Business Accounts needs one value proposition three teams can repeat, enablement an upmarket rep will actually use, and a real channel into the roadmap. I have already built all three.

The core proof is Sensata: a **\$2M+ zero-to-one GTM launch** with enablement that lifted win rates 30% across 50+ reps, built on 30+ customer interviews checked against real usage data before a line of messaging shipped.

What is harder to find is someone who has run the full loop, customer input to positioning to enablement to roadmap signal, on one product line already. That is the exact scope this seat is asking someone to own for Business Accounts.
