Hiring Team, Braze

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a $627M target by win rate, average dollar per win and pipeline stage, broken out by salesperson and by product line. That dashboard carried the weekly and quarterly business reviews and surfaced $433M in margin gaps for leadership to prioritize. A metrics framework that gives Global AM and AI Sales leadership real time visibility into performance is the same build, run on a different number.

The territory, quota and capacity-planning problem in your posting sits next to work I already run. At PriceKeel, the company I founded, I own the CRM and CPQ, the forecast and pipeline reviews, and the deal approvals end to end, with an audit trail that turns a tribal-knowledge decision into one Finance can check against the deal data directly. Turning a process that lives in one person's head into something documented and repeatable is the harder half of scaling a sales org, and it is the half I have already built, not just studied.

AI-driven process improvement is already how I work, not a slide I would build for the interview. I automate the repetitive parts of my own forecasting and market-sizing analysis with Claude agents at Applied Materials, and I would rather point to that habit than claim an AI strategy I have not actually run against real sales data.

At Sensata I also negotiated multimillion-dollar customer quotes and built AP26 revenue models alongside senior executives, and built the enablement that got 50-plus reps actually using a new pricing process, not just trained on it. Getting a sales org to adopt a standard is harder than designing one, and pushing back on a number with data only works if the room already trusts you to be in it.
