PITCH DECK | FIVETRAN PROGRAM MANAGER, GROWTH, MONETIZATION & STRATEGIC INITIATIVES

Fivetran and dbt Labs are running two pricing playbooks through one integration right now. I have already built the governance cadence that turns a messy pricing backlog into a shipped, trackable program.

A $627M-target pricing governance program built from scratch, and the escalation cadence that recovered $700K+ in margin in two quarters.

- **$627M target tracked** across 1,200 pricing opportunities, 3 regions, 20 product lines
- **$700K+ recovered** by resolving cross-functional pricing escalations in 2 quarters
- **53% to 61% margin** shipped through a repricing program, not a recommendation
- **Own CRM, CPQ, deal approvals** end to end today at PriceKeel
- **Sales, Engineering, Finance** partnership built into every forecasting model I run

WHY THIS DECK EXISTS

The req does not ask for a pricing analyst. It asks for the person who turns pricing strategy into a governed, shipped program while two orgs merge underneath it.

What that actually requires

A governance cadence, meetings, decision rights, and an escalation path, that holds together while Fivetran and dbt Labs reconcile two separate pricing playbooks into one.

Cross-functional pull from Analytics, Product, Sales, Product Marketing, RevOps, Finance and Engineering, because a pricing commitment touches all seven on the way to shipping.

An operator who tracks commitments end to end and reports the outcome, not someone who hands off a recommendation and waits to hear what happened.

What I have already run

At **Sensata**, I built the FY2026 Bleeders and Leakers governance cadence from scratch, no existing tool answered the question, tracking 1,200 opportunities against a $627M target.

At **Applied Materials**, I partner directly with Sales, Engineering and Accounts to turn scattered field input into one shared forecasting view, the same partner list this role names.

At **PriceKeel**, I run the CRM, CPQ, forecast and pipeline reviews and deal approvals myself, the operating cadence a pricing program runs on, not a slide describing one.

> **The through-line: every pricing program I have run closed the loop from governance cadence to recovered margin, it did not stop at the recommendation.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Own the cross-functional execution that turns pricing strategy into well-governed, shipped programs."*

> *"Track program deliverables and commitments end to end."*

> *"Manage sales escalations and the cross-functional coordination required to resolve them."*

> *"Expand upon and further operationalize Fivetran's pricing and program management playbooks."*

My proof

Sensata, governed and shipped: built the FY2026 Bleeders and Leakers cadence end to end, tracking 1,200 opportunities against a $627M target across 3 regions and 20 product lines.

Sensata, escalations resolved: closed cross-functional pricing escalations with Sales, recovering $700K+ in margin in 2 quarters, then shipped a repricing program that raised distributor margins from 53% to 61%.

PriceKeel, playbook operationalized: built the audit trail and guardrail engine Finance can review for every pricing decision, running CRM, CPQ and deal approvals as one governed loop.

Applied Materials, cross-functional by design: partners with Sales, Engineering and Accounts on every forecasting and market-sizing model, the exact function list this role names.

THE PROOF, IN DEPTH

Build the governance cadence, resolve the escalation, then ship the margin it was designed to catch.

The same three-step pattern, run twice at Sensata and running today at PriceKeel: build the tracking system that did not exist, resolve the cross-functional escalations it surfaces, then report the outcome leadership acted on.

$627M Target

Governance Cadence Built From Scratch

1,200 pricing opportunities tracked against a $627M target across 3 regions and 20 product lines, surfacing $433M in margin gaps for leadership to prioritize.

$700K+ Recovered

Sales Escalations Resolved

Cross-functional escalation resolution with Sales in 2 quarters, the exact coordination loop this role owns end to end.

53% to 61%

Shipped Repricing Program

Distributor and channel-partner margins raised in under 2 quarters, a program outcome reported to leadership, not a one-off recommendation.

None of these stopped at a deck in a folder. Each one closed the loop from an ungoverned backlog to a number leadership could point to.

FIRST 30 DAYS

What the first month on Fivetran's pricing and monetization program looks like.

WEEK 1

Map the combined pricing backlog

Pull the current state of pricing and monetization commitments across both the Fivetran and dbt Labs playbooks, find what is already tracked and where a decision still lives in someone's inbox.

Why first: the same first move behind the Sensata dashboard, size what exists before building the cadence on top of it.

WEEK 2-3

Stand up the governance cadence

Set the meetings, decision rights and escalation path connecting Product, Sales, Engineering, RevOps, Product Marketing and Finance around pricing commitments, with Analytics feeding the pricing-impact view.

Why now: the same cadence that resolved Sensata's sales escalations and the partnership running today across Sales, Engineering and Accounts at Applied Materials.

WEEK 4

Ship the first operationalized playbook piece

Turn one rollout plan, escalation runbook, or closed-lost-due-to-pricing report into a repeatable artifact leadership can reuse next cycle, not a one-off deliverable.

Why this fast: the same discipline that turned Sensata's tracking system into a program leadership acted on and PriceKeel's audit trail into something Finance can review today.

CLOSE

You are hiring someone to turn pricing strategy into a governed, shipped program while two playbooks merge into one. I have already built that cadence, resolved the escalations it surfaced, and shipped the margin it was designed to catch.

The governance half: a **$627M-target cadence built from scratch**, tracking 1,200 opportunities across 3 regions and 20 product lines, and the escalation resolution behind **$700K+ recovered** in 2 quarters at Sensata.

The operating half: running **CRM, CPQ, forecast and pipeline reviews and deal approvals** as one governed loop at PriceKeel today, and partnering with Sales, Engineering and Accounts on every forecasting model at Applied Materials, the exact partner list this role names.
