Hiring Team, Perplexity

"We don't buy, we build" is the line in your posting that made me stop scrolling. I already run that way. At Applied Materials I automate the recurring parts of my own market analysis with AI agents built on Claude instead of waiting on a vendor tool, and at Plug Power I automated the WordPress and Pardot lead flow myself, cutting cost per lead 50% because I built the pipe rather than requested one from a marketing-ops queue.

Your dashboard requirement is one I have already shipped at real scale. At Sensata I built the FY2026 Power BI dashboard that tracked 1,200 pricing opportunities against a \$627M target across 3 regions and 20 product lines, with its own pipeline funnel, win-rate tracking and stage distribution, so leadership could see exactly where the number was slipping before the quarter closed. That is the same self-service, define-your-own-metrics habit your posting asks for, just applied to a pricing pipeline instead of a marketing one. I also built the SQL and GA4 KPI framework that turned 50K plus connected industrial devices into high-intent buyer cohorts, which is the intent-based targeting layer your posting wants owned in-house.

The channel-mix half of the job is where Plug Power and Pixis map closest. I ran \$100K/month in paid search and paid social across Google, Microsoft, Meta and LinkedIn to a 25% lower CPA, then separately ran an 8-client, \$15K to \$90K per month portfolio at Pixis across paid, retail media and iOS user acquisition, cutting client churn 50% through account strategy and channel diversification. Killing what does not work and doubling down on what does is not new to me; it is how both jobs ran week to week.

I'd bring the same instinct to Perplexity's enterprise funnel: build the automation instead of renting it, own the dashboard instead of asking for one, and treat the buyer personas your posting names, IT leaders, developers, AI decision-makers, as segments to test against rather than a static list. Proof trail at adhi-growth-ai.vercel.app/ref/perplexity.
