Hiring Team, Albertsons Companies

Your posting describes a National Pricing Function that runs on governance, analytics and change management, not a single price list. I built exactly that structure at Sensata leading the Bleeders and Leakers program: I segmented 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, then built the Power BI reporting that surfaced $433M in margin gaps and turned them into $700K plus in recovered margin in two quarters.

That program also had to hold up under Finance scrutiny and survive a leadership handoff, which is the change-management half of the job. At PriceKeel, the company I founded, I built the audit trail and discount-guardrail engine that gives Finance an explainable record behind every pricing exception before it goes live, the same discipline a pricing tool needs once it leaves a pilot market and goes enterprise-wide. I also raised distributor and channel-partner margins from 53% to 61% in under two quarters by repricing parts sold through distribution, informed by competitive benchmarking across 10+ key players, the kind of vendor-sourced competitive read a Competitive Intelligence program depends on.

On the demand side, I ran 30+ customer interviews with OEMs and distributors on willingness to pay at Sensata and fed those segmentation inputs directly into a $2M plus product launch. At Applied Materials I build forecasting and market-sizing models that turn Sales, Engineering and Accounts input into one pricing view, automating the recurring analysis with Claude AI agents so more time goes to the recommendation itself, not the spreadsheet behind it.

I would want fifteen minutes to talk through how I would stand up the first quarter of pricing performance metrics for your National Pricing Function. Proof trail at adhi-pricing-ai.vercel.app/ref/albertsons-companies.
