Hiring Team, DoorDash

Your posting names the hard part of this role up front: you are not hiring someone to run a channel that already works, you are hiring someone to find out whether a new one will. I have spent the last five years doing exactly that math with imperfect data. At Pixis, I ran retail media and iOS app user-acquisition as net-new tests across an 8-client portfolio, alongside the core paid channels, and used what worked to cut churn 50% while carrying P&L for the team running it.

The measurement side of new-channel work is where most of these bets actually die, so I built for it directly. At Plug Power I automated the Salesforce, Adobe Analytics and Google Tag Manager stack into one closed-loop attribution view behind \$100K/month in budget, cutting CPA 25% and cost per lead 50%, then presented the plan to leadership for approval myself. That is the same build-the-plumbing-first instinct your team needs to get deeplinking, tracking and incrementality working across a portfolio of Influencer & Affiliate, SMS and whatever comes next.

I also like being the glue, not just the operator. At Sensata I ran 30+ structured interviews with OEMs and distributors to find where their process actually broke, checked what I heard against SQL and GA4 usage data before trusting it, and turned that into fixes that lifted CSAT 22% and qualified leads 35%, all while keeping Product, Engineering and Finance aligned on one plan. I now automate the repetitive parts of that analysis with Claude AI agents at Applied Materials, so a channel bet gets tested and reported on faster than it used to.

I would welcome the chance to talk through how this maps to owning DoorDash's new-channels portfolio. Proof trail at adhi-growth-ai.vercel.app/ref/doordash.
