Hiring Team, Baseten

At Sensata I sat in the room where "sensor accuracy" had to become a number an OEM buyer would sign off on, and I wrote the positioning and joint-launch content that did it, lifting conversion 15% on priority releases. That is the same translation work this role asks for: taking what Baseten's ecosystem partners build on your inference stack and turning it into a story their buyers and yours both believe.

The cross-functional half of the job is not new to me either. At Applied Materials I sit between Sales, Engineering and Accounts every week to keep one market view current, the same loop a partner-facing GTM program runs on with product, product management, growth and events all pulling in the same direction. At Sensata I built the enablement and onboarding content, decks and case studies, that took a 50-person rep team's win rate up 30%, and ran 30+ interviews with OEM and distributor partners to find what was actually stopping adoption before I wrote a word of positioning. Those are the parts of this job that are hard: translating technical capability into content a buyer trusts, and getting Sales and partners both running on the same story.

I also build with the tools your partners build on. I shipped SwipeHire, an AI job-matching platform on the OpenAI API, from a blank PRD to 50+ users, including the competitor teardowns and onboarding flow that got it there, and I run Claude AI agents weekly at Applied Materials to automate forecasting work. Writing partner enablement content for an inference company is easier when you have actually integrated an API and shipped the thing it powers.
