Hiring Team, AMAX

AMAX prices for cost structures that move with every GPU allocation and supplier term, and I have only ever built pricing where the stakes shift mid-deal. At Sensata, I owned pricing strategy for the Industrial BU across multiple product lines and led the Bleeders and Leakers program, raising distributor and channel-partner margins from 53% to 61% in under two quarters by repricing parts sold through distribution. That is the same motion your posting describes: translate a shifting cost base into a price that still protects margin.

Your nice-to-have list mentions GPU ecosystems and accelerated computing. I am currently inside that world at Applied Materials, building competitive, cost-aware pricing for the semiconductor equipment market behind AI, HPC and high-performance computing deployments, and forecasting the demand inflection points that make those costs move. Before that, at Sensata, I built the FY2026 Bleeders and Leakers Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, surfacing $433M in margin gaps so leadership could prioritize by salesperson and product line. That is the executive-ready reporting your posting is asking for, built from the ground up, not bought off a shelf.

I also know the negotiation side of this job. I partnered with senior executives on AP26 revenue models and multimillion-dollar customer quotes at Sensata, the same cost-transparency and scenario-analysis work your posting asks for when supporting pricing negotiations with suppliers and partners. I have built the tooling for it too: PriceKeel, the company I founded, reads a live discount exception inside a deal platform and recommends a guardrail learned from a company's own closed-won and closed-lost history, with an audit trail Finance can actually use.

That is the discipline this role runs every day, pulling a profitable number out of a cost structure that will not sit still, now pointed at GPU-accelerated infrastructure instead of industrial hardware. Proof trail at adhi-pricing-ai.vercel.app/ref/amax.
