Hiring Team, Box

Your posting asks the person in this seat to own the weekly forecast, the pipeline review and the QBR cadence for Commercial Sales, not just build a dashboard once and hand it off. That is the job I already run. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard from scratch: 1,200 opportunities tracked against a $627M target across 3 regions and 20 product lines, with its own win-rate and stage-distribution view cut by salesperson. That dashboard fed the recurring review leadership used to find $433M in margin gaps, and the program behind it recovered $700K+ in margin in two quarters. The cadence is the same one you are hiring for: build the model, run the recurring review, get leadership to act on what it shows.

The territory and capacity-planning side of this role, and the part about connecting funnel data across marketing, PLG and sales, is where I spend most of my time too. At Sensata I built KPI frameworks in SQL and GA4 across 50,000+ connected devices that lifted qualified leads 35% and fed straight into the sales pipeline, and at Plug Power I automated the WordPress and Pardot lead flow so SEM spend tied directly to MQL quality and stage 1 opportunities instead of sitting in a separate marketing report. Now, as founder of PriceKeel, I run the CRM, CPQ, forecast reviews and deal approvals myself for a live B2B SaaS pricing product, so I know what breaks in that handoff from both sides of the table.

The line in your posting about driving AI adoption in commercial workflows is the part I would actually ask about in an interview, because I am already doing it. At Applied Materials I automate repetitive revenue analysis with AI agents built on Claude instead of asking an analyst to rebuild the same model every week. PriceKeel exists because I kept watching deal desks make the same discount call by hand that an agent could flag and explain in seconds. I would rather bring someone who has already shipped that kind of tool into your commercial sales org than someone reading about it for the first time on the job.

Box's Commercial Sales org is big enough to need a real forecasting and reporting system and still early enough in building AI into that system that one hire can shape how it gets done. I would like to be that hire. Proof trail at adhithyabhaskar.vercel.app/ref/box.
