Hiring Team, Listen Labs

Your posting asks a candidate to walk you through a launch: what you decided, what you wrote, and what happened to adoption after. At Sensata I decided the positioning and the demo narrative for a new sensing-product line myself, wrote the launch materials and the talk tracks reps used on calls, and watched it land at $2M+ in first-year revenue across North America and Europe. The conversion lift on that positioning held at 15% on the priority launches that followed, which told me the story, not the launch date, was what actually moved the number.

Most of the 50+ reps I built that enablement for had never sold a sensing product before. I wrote the battlecards and the objection handling myself, ran 30+ structured interviews with OEMs and distributors to pressure-test the message before it reached a call, and win rate moved 30%. That is the exact gap your posting describes, reps joining without a research background needing to reach their first win fast, and it is the part of the job I already know how to build, not just run.

Competitive work was not a side project either. I built a 10+ player benchmarking view that fed directly into a price realignment, 12% YoY revenue and 8% market share, and separately tracked competitor and customer moves across EMEA and the US to keep the story current. A win/loss program only earns its keep if someone closes the loop between a lost deal and the next talk track, and that loop is what I ran.

The AI half of your posting is not new ground for me either. I already automate my own recurring competitive and market research with agents built on Claude at Applied Materials instead of rebuilding the same report every cycle, and I built an AI job-matching platform from a blank page with no playbook to inherit, owning the GTM and the pricing-tier decisions myself. Building the AI tooling a go-to-market team needs to self-serve messaging and positioning is the same instinct, pointed at your product instead of mine.
