Hiring Team, Zendesk

At Sensata I owned the GTM for a new sensing product line end to end: positioning, channel, launch plan, and the campaign kits the sales team actually used, partnering with regional marketing in North America and Europe on timing and local activation. That is the full loop your posting describes for Zendesk's AI product lines, brief through optimization, with budgets, timelines, assets and approvals sitting under one owner rather than split across teams.

Email and nurture is where I spend the most hands-on time. At Plug Power I rebuilt the lead flow through WordPress and Pardot and cut cost per lead 50% while lifting conversion 20%, then tied that performance back to Salesforce so sales saw exactly which campaigns fed their pipeline. The webinar and third-party side of your role maps closely to work I already produce: at Sensata I built the case studies, decks and email copy that became reusable campaign kits for 50+ reps, lifting win rates 30%, and I ran 30+ customer interviews to pressure-test the messaging before it shipped.

Your posting asks for someone who tracks engagement, conversion and AI pipeline contribution with analytics partners, then turns that into recommendations regional marketing can act on. At Sensata I built KPI frameworks in SQL and GA4 across 50,000+ connected devices to find the cohorts that actually convert. At Applied Materials I now automate the repetitive side of that research and reporting with AI agents built on Claude, which is the same instinct your line about using AI tools for research, personalization and campaign workflows is pointing at. Earlier in my career I was the liaison between regional marketing managers, localization and analytics teams at GenY Medium, so coordinating a campaign across markets instead of inside one is familiar territory.

Salesforce, Pardot and HubSpot are tools I run today, and Tableau and Power BI are how I get campaign results in front of people who need to act on them. I would welcome the chance to talk through how the Sensata and Plug Power campaign work maps onto driving AI-product pipeline at Zendesk. Proof trail at adhi-product-ai.vercel.app/ref/zendesk.
