Hiring Team, Lumin Digital

Your posting draws a clear line between maintaining a price book and building pricing strategy from scratch. That is exactly where I have spent the last two years. At Sensata, I built a pricing strategy program instead of a price list: the Bleeders and Leakers initiative turned the company's own closed-won and closed-lost deal history into pricing guidance Sales actually used on high-ACV, long sales-cycle deals, recovering $700K+ in margin in two quarters and lifting distributor margins from 53% to 61% over the same stretch.

I later built that same discipline into a product. PriceKeel reads a live discount exception inside the deal platform and recommends an explainable guardrail learned from a company's own closed-won and closed-lost deals, with an audit trail Finance can check line by line instead of taking a rep's word for it. I run the company's own CRM and CPQ configuration day to day, the same category of tooling your posting lists as a baseline for this role, so I am not learning the stack, I am extending work I already do.

Pricing strategy rarely lives inside one function, and I have run it from several at once: carrying P&L targets and building value-based pricing frameworks as Strategic Marketing III at Applied Materials, reconciling Sales and Engineering input into one forecast; owning P&L and account strategy for an eight-client portfolio as a Customer Success Manager at Pixis; and aligning pricing, positioning and channel plans directly with Sales on new product launches at Sensata. The habit that carries across all three is the same one your posting is asking for: take an ambiguous pricing question, pull in the right data and the right people, and leave behind a framework someone else can run without me in the room.

I would welcome fifteen minutes to talk through how that maps onto the pricing work your GTM Systems and Intelligence team owns. Proof trail at adhi-pricing-ai.vercel.app/ref/lumin-digital.
