

PITCH DECK | AMS OSRAM PRODUCT MARKETING MANAGER

ams OSRAM's Optical Interconnect business needs a product marketer who already sizes semiconductor markets and prices next-generation product lines, not one who would be learning the market structure on the job.

A market-sizing-to-launch track record built across Applied Materials and Sensata, paired with the customer-facing technical content and competitive intelligence this role runs on daily.

Applied Materials market sizing - semiconductor TAM and value-based pricing across multiple product groups

Sensata \$2M+ launch - owned GTM end to end (positioning, pricing, channel, launch) for a new product line

30+ customer interviews - became technical content and roadmap input, CSAT +22%

Sales enablement - competitive battlecards for 50+ reps, win rates +30%

AI agents on Claude - automating market and pricing analysis in production today

An Optical Interconnect roadmap does not wait for positioning to catch up. **Market and competitive analysis that lags engineering is a business-development problem before it is a marketing one.**

What that actually requires

Customer meetings, technical reviews and commercial discussions that turn engineering specs into a value proposition a buyer actually believes.

Market, customer and competitive analysis sharp enough to surface real business opportunities, not restate what engineering already knows.

Content, blogs, webinars, conference presentations and executive communications, that keeps pace with a next-generation product roadmap.

What I have already built at that exact seam

Sized **semiconductor markets** with Sales, Engineering and Accounts at Applied Materials, then built the value-based pricing and forecasting that followed from it.

Owned a **full launch end to end** (positioning, pricing, channel, launch) to \$2M+ in first-year revenue at Sensata, turning sensor specs into content OEM and distributor buyers acted on.

Ran **30+ structured customer interviews** and competitive benchmarking across EMEA and the US that became the sales enablement library 50+ reps relied on.

The through-line: I already run the market-sizing-to-content-to-customer loop this role owns, on technical products where an engineering claim has to survive a commercial conversation.

What the ams OSRAM posting asks for, and where the proof already sits.

What the role covers

- "Support customer meetings, technical reviews, and commercial discussions."
- "Conduct market, customer, and competitive analysis to identify business opportunities."
- "Generate content for blogs, webinars, conference presentations, and executive communications."
- "Work closely with product management, engineering, and sales teams to translate technology into clear customer benefits."

My proof

- Customer-facing commercial work:** negotiated multimillion-dollar customer quotes and revenue models directly alongside senior executives at Sensata, carrying P&L targets for a multi-\$100M business.
- Market and competitive analysis:** sized semiconductor markets with Sales, Engineering and Accounts at Applied Materials; benchmarked 10+ competitors across EMEA and the US at Sensata.
- Technical content across formats:** built customer-facing presentations, case studies and launch decks that turned sensor specs into buyer language, plus the leadership decks and executive communications senior stakeholders review each quarter.
- Cross-functional translation:** pricing and forecasting move with Sales, Engineering and Accounts today; at Sensata, the product roadmap for sensor solutions moved with engineering across 3 regions.

Applied Materials and Sensata: the same market-sizing-to-launch loop, run on technical semiconductor and industrial products.

Built as the owner of GTM, positioning and technical content for a new product line, not handed a messaging doc to localize after launch.

\$2M+

First-Year Revenue, New Product Line

Owned positioning, pricing, channel and launch end to end at Sensata, the same next-generation launch motion an Optical Interconnect roadmap runs on.

30+ / 22%

Customer Interviews / CSAT Lift

Structured OEM and distributor interviews that fed straight into technical content and the product roadmap.

50+ / 30%

Reps Enabled / Win-Rate Lift

A competitive battlecard and case-study library built from real benchmarking across EMEA and the US, not assumptions.

The semiconductor-market discipline behind it is live today at Applied Materials: sizing the market with Sales, Engineering and Accounts, then pricing and forecasting multiple product groups against their own inflection points.

What the first month on the ams OSRAM Optical Interconnect team would look like.

WEEK 1 Sit in on the technical reviews, not the deck library Pull the last quarter of customer technical reviews and commercial discussions and sit in on them directly, the same move that grounded every Sensata launch in a real conversation instead of a guess. ----- Why first: a value proposition built on assumptions is the fastest way to lose a technical buyer's trust before it ever ships.	WEEK 2-3 Ship the customer-facing content the pipeline is missing most Build the single presentation, case study or technical brief most likely to move a live customer or partner conversation this quarter, benchmarked the same way the Sensata enablement library was. ----- Why now: one asset in active use in a customer meeting beats a content calendar nobody has opened yet.	WEEK 4 Turn the first win into the market-intelligence cadence Set the market and competitive-analysis cadence that keeps positioning, content and business-opportunity tracking current as the optical interconnect market moves. ----- Why this fast: market intelligence only earns its keep by moving a real customer or partner conversation first.
---	---	--

CLOSE

ams OSRAM needs a product marketer who already sizes semiconductor markets, prices next-generation product lines and turns engineering into a buyer's language. I already run that loop.

The core proof is two technical-product launches: [Applied Materials](#), where market sizing, value-based pricing and forecasting run across multiple product groups today, and [Sensata](#), where I owned GTM, positioning and technical content for a new product line end to end to \$2M+ in first-year revenue.

What transfers immediately to Optical Interconnect is the mechanics this role is built around: customer and competitive analysis, technical content across every format, and translating engineering into a customer benefit a commercial conversation can close on.
