Hiring Team, ams OSRAM

Right now, as Strategic Marketing III at Applied Materials, I size semiconductor markets with Sales, Engineering and Accounts and turn that into value-based pricing and forecasting across multiple product groups. That is the exact loop your Optical Interconnect posting describes: market, customer and competitive analysis that engineering and sales can actually act on, not a slide deck that sits unread after the review.

The customer-facing half of the role is also work I have already run. At Sensata I owned the GTM for a brand-new sensing product line end to end, positioning, pricing, channel and launch, and built the customer-facing presentations, case studies and launch decks that turned sensor engineering specs into language OEM and distributor buyers could act on, driving \$2M+ in first-year revenue. I ran 30+ structured interviews with those same OEMs and distributors to get the content right before it shipped, then built the sales enablement and competitive benchmarking across EMEA and the US that lifted win rates 30% for 50+ reps. Translating a technical product into a buyer's language, then proving it in front of the people who have to say yes, is the same mechanic your posting asks for around next-generation optical interconnect products.

I also carried customer-facing commercial work directly: negotiating multimillion-dollar quotes and revenue models alongside senior executives at Sensata while raising distributor and channel-partner margins, and running paid and organic programs that moved real lead-generation numbers at Plug Power. None of that is theoretical; it is the same muscle the posting wants applied to datacenter infrastructure and ecosystem partnerships.

A BE in Mechanical Engineering plus an MS in Marketing Analytics is why I can sit in a technical review and a commercial discussion in the same week without translating twice. Proof trail at adhi-product-ai.vercel.app/ref/ams-osram.
