PITCH DECK | THOUGHTSPOT COMPETITIVE INTELLIGENCE MANAGER

Reps need the newest competitive answer before the next AI-analytics launch lands, not three quarters later. I have already built that pipeline, twice.

Competitive benchmarking, battlecard upkeep, win/loss analysis and executive reporting, the pieces the posting names, each with a proof point attached.

- **10+ competitors benchmarked**, +8% market share and +12% YoY revenue at Sensata
- **170 facilities to a SAM of 28**, 10+ competitor teardown for Safran
- **EMEA and US competitor reads** turned into win/loss-style calls at Sensata
- **Sales enablement for 50 reps**, lifting win rates 30% at Sensata
- **Semiconductor market intel** with Sales and Engineering at Applied Materials today

WHY THIS DECK EXISTS

The job is not "watch the market." It is turn a competitor's new move into a battlecard update and a talking point before the next deal needs it.

What that actually requires

Competitors in AI analytics ship fast. A battlecard or quick-reference guide that was accurate last quarter can cost a deal this quarter if nobody refreshes it.

The refresh has to turn into messaging, launch and pricing insights sales can use cold, not a research memo that sits in a shared drive.

None of it counts until reps are trained on the new positioning and the win/loss story reaches executives in a form they can act on.

What I have already run

At **Sensata**, I benchmarked 10+ competitors across channel, pricing and market share and turned the read into a pricing realignment that drove +12% YoY revenue and +8% market share.

At **Sensata** again, I built sales enablement materials (decks, case studies) for a 50-rep team and briefed senior executives with competitive talking points on live deals.

At **Applied Materials** today, I track competitive and demand inflection points with Sales and Engineering, the same monitor-and-brief loop this role runs on.

The through-line: every competitive read I have shipped turned into a sales-facing artifact and an executive-facing number, not a research note that stayed mine.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Monitor competitors and provide messaging, launch, roadmap, and pricing insights."*

> *"Maintain sales battlecards and quick-reference guides, and support major deals with talking points."*

> *"Train sales and marketing on competitive positioning."*

> *"Report win/loss analysis and market insights to executives, and support PMM with market assessments."*

My proof

Sensata, competitive benchmarking: 10+ competitors benchmarked on channel, pricing and market share, feeding the pricing and messaging calls behind +12% YoY revenue.

Sensata, sales enablement: decks and case studies built for 50 reps, lifting win rates 30%, plus competitive talking points briefed to senior executives.

Sensata, win/loss-style reads: EMEA and US competitor and customer analysis turned into revenue-opportunity calls for category leadership.

Safran project, market assessments: 150+ facilities and 10+ competitors analyzed, pricing-strategy assessments presented to leadership.

THE MONITOR-TO-DEAL LOOP, IN DEPTH

A competitor move becomes a battlecard line, the battlecard becomes a rep's talking point, and the talking point wins the deal.

Same loop, three stages, each with a measured result: competitive benchmarking, sales enablement, and the executive-facing story that closes it.

+8% Market Share

Sensata, 10+ Competitor Benchmark

Pricing realigned on a competitive benchmark across 10+ players, closing with +12% YoY revenue alongside the share gain.

30% Win-Rate Lift

Sensata, Sales Enablement for 50 Reps

Decks and case studies built for a 50-rep team, kept current with competitive talking points for executive-level deals.

170 to a SAM of 28

Safran, Global Market Sizing

150+ target facilities and 10+ competitors analyzed across 4 verticals, with market assessments presented to leadership.

None of these stages ran alone. The benchmark fed the enablement materials, and the enablement materials fed the executive win/loss story, one pipeline, not three separate reports.

FIRST 30 DAYS

What the first month on ThoughtSpot's Competitive Intelligence function looks like.

WEEK 1

Map the current battlecards and win/loss sources

Sit with Sales, Field Marketing and Sales Engineering to find which battlecards and quick-reference guides are stale, and which deals have the clearest win/loss signal to mine first.

Why first: the same first move that turned Sensata's EMEA and US competitor reads into one clear view before proposing anything new.

WEEK 2-3

Ship the first refreshed battlecard and talking points

Rebuild the battlecard on the AI-analytics competitor with the newest launch, messaging and pricing insights, and arm the sales team with talking points for the next live deal.

Why now: the same discipline that turned Sensata's 10+ competitor benchmark into +12% YoY revenue.

WEEK 4

Train the team and report the first win/loss read

Run the first competitive-positioning training with sales and marketing, then present the first win/loss analysis and market assessment to executives on a live quarter.

Why this fast: the same cadence that carries the leadership decks and OKRs behind every quarterly review at Applied Materials and Sensata.

CLOSE

You are hiring someone to turn a fast-moving competitive set into battlecards, talking points and a win/loss story executives can act on. I have already run that loop in two different industries.

The core proof is one Sensata loop run at scale: a 10+ competitor benchmark that fed a pricing realignment, driving **+12% YoY revenue and +8% market share**, paired with sales enablement materials for a 50-rep team that lifted **win rates 30%**.

What carries into ThoughtSpot is the global-comparison habit behind the Safran project, 170 facilities sized down to a SAM of 28 with pricing-strategy assessments presented to leadership, and the storytelling habit behind every leadership deck I have built since. At Applied Materials today I automate the recurring version of that competitive reporting with AI agents built on Claude, so the hours go into the next battlecard refresh, not rebuilding the last one.
