Hiring Team, SiteRecon

I run PriceKeel the way your Operations Lead job description reads. I built the CRM, CPQ and deal-approval workflow from zero, and I do not roll a change out everywhere at once: I pilot it with one early customer, measure what happens, and only then take it across the rest of the product. That is the same instinct you are describing for the mapping floor, test on one team or shift before you touch the other 120.

I also have the part of the job that is harder to teach: taking a problem from root cause to a fix that holds. At Sensata I found that our distributor pricing was bleeding margin, built the negotiation program myself off competitive gaps and customer willingness to pay, and tracked the result against target until it held, $700K plus recovered in two quarters. Nobody handed me that fix. I found it, built it, and proved it with the numbers, which is the exact loop your job description asks for: find the problem, size it, implement the solution, show it worked.

The buy-in side is familiar too. At Applied Materials I get Sales, Engineering and Accounts to act on a market view I built, with no reporting line to any of them, through the same plain, structured communication a floor rollout depends on. I run the OKR cadence and the weekly and quarterly reviews that keep cross-functional teams pointed at one number, and I have hired and managed teams end to end, an 8-person account team at Pixis and the team behind my own SwipeHire product, so the people side of change management is not new ground.

One more thing that should matter here specifically: I already automate repetitive research and reporting with Claude agents in my day job, the same kind of leverage an operation absorbing new volume needs instead of new headcount.
