Hiring Team, OpenAI

The line in this posting that stopped me was "zero-to-one opportunity to establish the strategy and programs that guide businesses from initial interest and their first campaign to sustained success." I built that exact pipeline at Plug Power: the WordPress and Pardot lead flow didn't have routing or tracking when I got there, so I built the triggered email sequence myself and cut cost per lead 50%. That is lifecycle infrastructure built from nothing, not a program I inherited and tuned.

The retention and segmentation half of this role is the same work I ran at Pixis and Sensata. At Pixis I owned an 8-client, \$15K to \$90K a month SMB advertiser portfolio and cut churn 50% through account-health signals, channel diversification and vertical-specific winback plays, the reactivation and expansion motion this req asks for. At Sensata I built KPI frameworks in SQL and GA4 across 50K+ connected devices to segment usage cohorts and surface the high-intent accounts worth a different message, which lifted feature adoption 18%. Pardot and HubSpot are the automation platforms I have built on directly; picking up Marketo's specific journey logic on top of that is a tool swap, not a new discipline.

I also already run the AI-assisted side of this role. I automate recurring program analysis and reporting with Claude agents as Strategic Marketing III at Applied Materials, and I shipped an onboarding flow end to end on the OpenAI API for my own project, SwipeHire, taking 50+ early users from signup to first match and lifting activation 25% through 8+ A/B tests and 12+ interviews. I would welcome 15 minutes to talk through where the SMB advertiser lifecycle work maps first. Proof trail at adhi-growth-ai.vercel.app/ref/openai.
