Hiring Team, ServiceTitan

Your posting describes one person owning funnel performance, ROI modeling and planning as three connected pieces, not three separate jobs. That is the shape of the Bleeders and Leakers system I built at Sensata: 1,200 pipeline opportunities scored against a $627M target across 3 regions and 20 product lines, with win rate, average deal size and stage distribution tracked by salesperson and product line so leadership had one trusted view of funnel health instead of three competing spreadsheets.

The analysis only matters once it becomes a plan someone acts on. I surfaced $433M in margin gaps from that same dashboard, turned the number into a ranked recommendation for leadership, then drove the plan myself and recovered $700K+ in margin in two quarters, raising distributor margins from 53% to 61% along the way. That is the opportunity-identification-to-execution arc your Revenue Strategy and Operations team is asking a Senior Analyst to run solo on ambiguous questions.

Your posting names AI leverage directly, and that is already how I work. As Strategic Marketing III at Applied Materials I run Claude agents against recurring forecasting and market-sizing analysis: the agent takes the first pass, I make the call and tighten the rule, and the time that frees up goes to the judgment-heavy part of the job, exactly the loop your team is trying to scale into. I built the same muscle on the systems side at Sensata, where Salesforce fed the pipeline data behind every dashboard I shipped, and I have used HubSpot for lead-flow and campaign reporting since Plug Power.

Marketing analysts who can explain a dashboard to a VP and to the analyst next to them in the same sentence are rare; I have been doing that since I built sales enablement that lifted rep win rates 30% while also owning the BU-wide reporting those reps never saw.
