PITCH DECK | SERVICETITAN SENIOR ANALYST, MARKETING STRATEGY & OPERATIONS

Funnel performance, ROI modeling and planning are one connected job, not three. I have already built the dashboard, the margin recovery and the AI-leverage loop this seat is asking one analyst to run solo.

SQL and Power BI/Tableau reporting, ambiguous-question-to-plan execution, and Claude AI agents already running the first pass on recurring analysis.

- **$627M** pipeline, 1,200 opportunities, scored by win rate, stage and salesperson
- **$433M** in margin gaps surfaced, turned into a ranked, stakeholder-ready plan
- **$700K+** in margin recovered in 2 quarters driving that plan myself
- **Claude AI agents** running first-pass recurring analysis today at Applied Materials
- **Salesforce & HubSpot** on the revenue-systems side since Plug Power

WHY THIS DECK EXISTS

Owning funnel, ROI and planning for one function is not a reporting job. It is a design job: get the data model wrong and every business review becomes a debate about whose number is right.

What this seat is actually asking for

Translate ambiguous, cross-functional questions into a clear analysis and a plan, then drive that plan yourself, not hand it to someone else to execute.

Build the SQL and BI datasets that give leadership one trusted view of Marketing's health instead of three competing spreadsheets.

Use AI to create leverage: automate recurring reporting so the time saved goes to the judgment-heavy work, what to build and why it matters.

What I have already built and run

At **Sensata**, I built the Bleeders and Leakers system: 1,200 opportunities scored against a $627M target by win rate, stage and salesperson, the funnel-health view this role is asking to build from scratch.

I took that dashboard's $433M in margin gaps to a ranked recommendation, then drove the plan myself to $700K+ recovered, the identify-to-execute arc this req names directly.

At **Applied Materials** now, Claude AI agents take the first pass on recurring forecasting work so my call is the one that moves the number.

This req asks for funnel performance, ROI modeling, planning, SQL/Tableau dashboards, AI-driven reporting leverage, and HubSpot/Salesforce fluency, owned end to end by one analyst. That is the Bleeders and Leakers system, run again for ServiceTitan's Revenue Strategy and Operations team.

THE REQ, MAPPED

What the Senior Analyst, Marketing Strategy & Operations opening asks for, and where the proof sits.

What the role covers

> *"Drive three connected areas: funnel performance, ROI modeling, and planning... translate ambiguous, cross-functional questions into clear analysis and a plan, and drive that plan yourself."*

> *"Build SQL/Tableau datasets and dashboards from various data sources that give leadership a trusted view of Marketing's health."*

> *"Use AI to create leverage: automate recurring reporting and analysis, build tools and templates the broader team adopts."*

My Proof

Bleeders and Leakers at Sensata: 1,200 opportunities scored against a $627M target with win rate, avg $/win and stage distribution by salesperson and product line, the funnel-health and forecasting view this req asks the seat to own.

$433M to $700K+: turned the dashboard's margin gaps into a ranked, stakeholder-ready recommendation, then drove it myself to $700K+ recovered in 2 quarters, the identification-through-execution arc this req asks for.

Claude AI agents at Applied Materials: first-pass automation on recurring forecasting and pricing analysis today, redirecting the time saved to the judgment-heavy calls, the exact AI-leverage pattern this req names.

Salesforce and HubSpot: ran the pipeline data and lead-flow reporting behind these systems since Plug Power, the CRM fluency this req prefers.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: funnel health, ROI and forecasting visibility across a $627M book.

Built as a BU-wide Power BI system covering 1,200 pipeline opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, scored by win rate, avg $/win and stage distribution by salesperson and product line, the same "so what" reporting this req asks the seat to build and own.

$433M

Margin Gaps Surfaced

Ranked every pricing and discount risk into one view instead of chasing anecdotes deal by deal.

$700K+

Margin Recovered in 2 Quarters

Closed by driving the plan myself, acting on the dashboard's own signals.

53% to 61%

Distributor Margin Lift

A repricing program run off the same funnel and segmentation data.

The same seat built KPI frameworks in SQL and GA4 that lifted qualified leads 35%, the campaign-to-pipeline half of funnel performance most ops seats only see from the reporting side.

FIRST 30 DAYS

What the first month inside ServiceTitan's Revenue Strategy & Operations seat looks like.

WEEK 1

Map the funnel and reporting data model

Sit with Marketing, Sales and Business Systems to pull SQL/Tableau datasets into one trusted view of funnel health, attribution and spend, the same first move behind the Bleeders and Leakers dashboard at Sensata.

Why first: ROI modeling and planning decisions are only as good as the data model behind them.

WEEK 2-3

Ship the first readout and ROI model

Stand up the weekly/monthly business-review cadence and the first ROI model against real spend data, with a stakeholder-ready "so what" for each number, not just the number itself.

Why now: building the plan against real data, not in a vacuum, is what made the Sensata margin gains hold.

WEEK 4

Put AI on the recurring reporting

Put an AI agent on first-pass recurring reporting and data-quality checks, document the process for the team, and redirect the time saved to the next high-impact special project.

Why this fast: the same habit that keeps Claude agents running recurring forecasting analysis at Applied Materials today.

CLOSE

You are hiring one analyst to own funnel performance, ROI modeling and planning end to end. I have already built that exact system once, at a larger scale, and driven the plan myself to a result.

The core proof is Sensata: a **$627M-opportunity Power BI pipeline** scored by win rate, stage and salesperson, and **$700K+ in margin recovered in 2 quarters** driving the plan it surfaced myself.

What is harder to find is someone who also runs the AI-leverage side: at **Applied Materials** I run Claude AI agents on the first pass of recurring forecasting work every day, redirecting the time saved to the judgment calls, the exact pairing this req asks for.
