

PITCH DECK | AFFIRM REVENUE OPERATIONS LEAD

Sales, ISV, Strategic Partnerships and Marketplace are all running through the same mid-funnel at Affirm. I have already built the segmentation and stage-definition system that keeps that from turning into territory disputes and forecasting drift.

Territory planning, pipeline hygiene and CRM governance built by someone who runs that exact operating model today.

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

1,200 opportunities segmented across 3 regions against a \$627M target

53% to 61% distributor margin lift via deal structures that held

PriceKeel - founder running CRM, CPQ, opportunity standards and deal approvals end to end

Claude AI agents automate recurring forecasting and reporting work today

The risk is not slower deal flow. It is **territory rules and stage definitions that stop agreeing across Sales, ISV, Partnerships and Marketplace.**

What a multi-motion mid-funnel runs into

Sales, ISV, Strategic Partnerships and Marketplace each own accounts and stages a little differently, and an account-to-rep mapping fix in one motion can quietly break an ownership assumption another team is relying on.

Without one shared segmentation and stage-definition standard, territory hygiene and forecasting accuracy drift apart exactly as deal volume across the merchant motions grows.

The fix is not another handoff meeting. It is a documented territory and process standard, plus a change-management routing habit that keeps Salesforce and BI data in sync as coverage scales.

What I have already run, at smaller scale

At **Sensata**, I built the Bleeders and Leakers Power BI dashboard: 1,200 opportunities segmented by region and product line against a \$627M target, with one consistent stage and win-rate definition shared by every team.

I did not stop at the dashboard. I **redesigned the deal structures** underneath the worst gaps, which is why the 53% to 61% distributor margin lift held past the first quarter.

I run that same loop today at **PriceKeel**: CRM and CPQ, opportunity management standards, and a documentation trail Finance can point to, because territory governance only works if someone owns it after launch.

Territory planning and governance, pipeline health and forecasting hygiene, and cross-functional governance across ISV, Strategic Partnerships and Marketplace are describing this exact loop: fix the segmentation once, document the ownership rule, keep it from drifting as coverage scales.

What the Revenue Operations Lead opening asks for, and where the proof sits.

What the role covers

- "Own mid-funnel sales lifecycle processes, including stage definitions, pipeline hygiene, forecasting inputs, and opportunity management standards."*
- "Drive territory planning, segmentation, account-to-rep mapping, ownership transitions, and ongoing territory hygiene."*
- "Partner with Business Systems on Salesforce workflows, opportunity layouts, territory rules, and GTM tooling improvements."*

My Proof

- Bleeders and Leakers dashboard at Sensata:** built the stage-definition and segmentation system, ranked opportunities by salesperson and product line, and closed \$700K+ of the gaps it surfaced in 2 quarters.
- CRM, CPQ and opportunity standards at PriceKeel:** set up and run the company's own CRM and CPQ, opportunity management standards, forecast and pipeline reviews, and deal approvals end to end, with a documented audit trail behind them.
- Applied Materials today:** build forecasting and market-sizing models across multiple product groups, turning field input into one view leadership checks against P&L targets.
- AI tools as a habit, not a pilot:** automate recurring forecasting and reporting work with Claude AI agents, the same tooling-adoption instinct a GTM tooling improvement asks for.

Bleeders and Leakers: **one segmentation model, one owner per gap, a fix that held.**

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with stage definitions, pipeline funnel, win rate and account-to-rep assignment by salesperson and product line: the same territory-hygiene and pipeline-health view a mid-funnel operating model has to deliver.

\$433M

Margin Gaps Surfaced

The segmentation model's job: rank every opportunity on one consistent definition so leadership could prioritize by salesperson and product line instead of chasing anecdotes.

\$700K+

Margin Recovered in 2 Quarters

Closed through negotiated fixes built on competitive gaps and documented customer willingness to pay, not a blanket policy change.

53% to 61%

Distributor Margin Lift

Redesigned the deal structure itself and routed it through Finance and Sales sign-off, so the gain outlived the first repricing pass.

The same BU carried P&L and revenue targets and ran multimillion-dollar customer quotes alongside senior executives, where pricing, Finance and Sales all had to agree on the same ownership and numbers before a deal moved. The common thread: one shared definition, then a fix that got measured after it shipped.

What the first month on Affirm's Revenue Operations team looks like.

WEEK 1 Map where ownership disagrees Pull stage definitions, territory rules and account-to-rep mapping as they exist across Sales, ISV, Strategic Partnerships and Marketplace today, and trace where two motions are using the same term or the same account boundary to mean different things. ----- Why first: the disagreement is usually visible in the data before anyone names it. Same move that started the Bleeders and Leakers program.	WEEK 2-3 Ship the segmentation standard Document one territory and stage-definition standard, build the account-to-rep mapping and ownership-transition rule behind it, and pressure-test it with Sales, ISV and Partnerships against real accounts before it goes into Salesforce. ----- Why now: ranking against one real target, then verifying with the cross-functional group, is what made the 53% to 61% distributor gain stick.	WEEK 4 Standardize the governance Turn the Week 1 findings into a documentation and change-management standard for territory and mid-funnel process updates, and partner with Revenue Enablement to train Sales, ISV and Partnerships on the new rules and tooling. ----- Why this fast: a segmentation model matters less if the ownership rules behind it stay ad hoc. Repeatability is the actual ask behind "territory hygiene."

CLOSE

You are hiring someone to keep the mid-funnel predictable as Sales, ISV, Partnerships and Marketplace all scale together. I have already built the segmentation and governance habit that does exactly that.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and a BU-wide dashboard that gave Sales, Finance and leadership one shared segmentation and stage-definition view of 1,200 opportunities against a \$627M target.

What is harder to find is someone who also runs that same stack today. I set up and operate **CRM, CPQ and opportunity management standards as founder of PriceKeel**, which means the territory-and-governance instinct behind this role is not something I would need to develop on the job.
