Hiring Team, Affirm

Your posting for the Revenue Operations Lead asks for someone who can own territory design end to end: segmentation logic, account scoring, ownership routing, and managing transitions at scale. That is close to what the FY2026 Bleeders and Leakers program at Sensata required. I built a Power BI system that ranked 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with one consistent stage definition and win-rate view assigned by salesperson and product line. It replaced a set of spreadsheets that Sales and Finance did not trust with one dashboard both teams signed off on, which is the same account-to-rep mapping and ownership clarity your mid-funnel operating model needs across Sales, ISV, Strategic Partnerships and Marketplace.

A segmentation model only earns its keep if someone acts on the gaps it finds. I used that dashboard to recover \$700K+ in margin in two quarters and to lift distributor and channel-partner margins from 53% to 61%, which meant redesigning the deal structure itself and routing it through Finance and Sales before it shipped. I also trained 50+ reps on the resulting enablement materials, the same tooling-adoption work your Revenue Enablement partnership is built to run, and it lifted win rates 30%.

I run the same discipline today at PriceKeel, where I set up and operate the company's own CRM and CPQ, opportunity management standards, forecast and pipeline reviews, and deal approvals, and built the documentation and audit trail that gives Finance one consistent definition of a clean deal. That is the change-management habit behind any territory rule or process standard, coming from someone who has to live with the system rather than hand it off after launch. At Applied Materials I build forecasting and market-sizing models across multiple product groups and keep automating the recurring parts of that work with Claude AI agents.

Affirm's Revenue org is running Sales, ISV, Strategic Partnerships and Marketplace motions through the same mid-funnel, and that is exactly where stage definitions and territory ownership start to drift if nobody owns the definitions. I would bring the pattern that held at Sensata: build the segmentation that shows where ownership or forecasting is unclear, then fix the process so it stays clear as the team scales.
