Hiring Team, Nscale

Your posting is blunt about what this job actually is: nothing on the GTM Strategy and Planning team is inherited, the operating model, the metric definitions, the planning cadence, none of it exists yet. I have built exactly that kind of system from nothing. At PriceKeel, the company I founded, I set up the CRM and CPQ, the forecast and pipeline review methodology, and the deal-approval workflow that a RevOps team would normally inherit instead of design from a blank page.

Exec dashboards and core GTM metrics are the other half of what you are hiring for, and that is where my Sensata work lives. I shipped the FY2026 Bleeders and Leakers Power BI dashboard, turning 1,200 pricing opportunities against a $627M target into one scorecard leadership read every quarter: pipeline funnel, regional performance, win rate, average dollar per win, stage distribution. It is the same metric spine behind "pipeline health, deal velocity, forecast accuracy" in your posting, just built for margin instead of bookings.

Annual and long-range planning with Finance is familiar ground too. I carried P&L and revenue targets for a multi-$100M Sensata business, shaped AP26 revenue models and site-transition strategy directly with senior executives, and repriced distributor and channel-partner margins from 53% to 61% in under two quarters by working the economics of the channel itself. At Applied Materials today I size the semiconductor market with Sales, Engineering and Accounts and automate the recurring research with AI agents built on Claude, which buys back the hours a GTM DRI should spend on the launch retrospective instead of the data pull.

I like that this role gets built once by one person and then run hard, not handed off half-finished to the next hire. Proof trail at adhithyabhaskar.vercel.app/ref/nscale.
