Hiring Team, Hex

Your posting asks for someone who owns how a signed deal turns into cash: pick the systems, chair the monetization committee, and keep the deal desk's calls fast without giving up margin or compliance. I already run that full loop for my own company. At PriceKeel I set up and run the CRM, CPQ configuration and deal approvals myself, and I built the audit trail that gives Finance an explainable record behind every discount exception, so the governance side is not a spreadsheet bolted on after the fact.

Before founding PriceKeel I ran deal governance at industrial scale. At Sensata I led the Bleeders and Leakers program, recovering $700K plus in margin in two quarters and lifting distributor margins from 53% to 61% by reviewing deal terms against competitive gaps and customer willingness to pay. Getting there meant aligning Sales, Finance and Product on where a reprice would hold and where it would not, the same alignment your monetization committee is built to force on pricing, packaging and discounting.

Redesigning a quote-to-cash system from first principles is exactly what I did at PriceKeel: the CRM, CPQ configuration and audit trail did not exist before I built them, which meant making the same system-selection and vendor tradeoffs that come with standing up a billing stack. That is the design instinct your posting is asking for in moving Hex's billing off Stripe and provisioning for 10x the customers.

I would also bring the reporting discipline behind your approval matrix and deal guardrails. At Sensata I built the dashboard that tracked 1,200 pricing opportunities against a $627M target by win rate, stage and cycle time, the same process-health view a weekly deal desk report needs to hold up under executive scrutiny. Proof trail at adhi-pricing-ai.vercel.app/ref/hex.
