PITCH DECK | HEX DEAL DESK MANAGER

One seat here owns quote-to-cash from first principles, chairs the monetization committee, builds the Stripe billing migration business case and ships the guardrails that let reps close without you. I have already run every piece of that loop, just not all under one roof yet.

Deal desk governance, CPQ and CRM system ownership, and a margin-recovery record, from someone who has built the audit trail, not just filled out the quote.

- **$700K+** margin recovered in 2 quarters via deal governance at Sensata
- **53% to 61%** distributor margin lift from repriced discount logic
- **CRM + CPQ + audit trail** built and run end to end, founder of PriceKeel
- **1,200 opportunities** tracked against a $627M target across 3 regions, 4 product families, 20 lines
- **Claude AI agents** automating recurring pricing analysis at Applied Materials

WHY THIS DECK EXISTS

This posting is really four jobs held by one person: Q2C redesign, the monetization committee, deal desk operations and the Stripe migration business case, all with real executive visibility.

What losing that discipline runs into

A deal desk without a clean approval matrix does not fail loudly. It fails as a quote approved on last quarter's assumptions, a CPQ workaround nobody documented, and a billing handoff that slows down the books instead of speeding them up.

Sales, Finance, Legal and Product all touch the same deal, so a gap in system ownership or governance becomes everyone's guessing game at the next approval, not just one team's problem.

The fix is not another spreadsheet. It is someone who treats quoting, system design and governance as one connected discipline instead of three separate jobs done by three different people.

What I have already run

At **PriceKeel**, I designed and built a quote-to-cash system from a blank page, the CRM, CPQ configuration and audit trail did not exist before I built them, the same system-selection work this role runs in moving Hex off Stripe.

At **Sensata**, I ran deal-by-deal governance inside the Bleeders and Leakers program, aligned Sales, Finance and Product on pricing calls, and built the Power BI system that made 1,200 opportunities auditable by segment and cycle time.

Both mean I have sat on the deal-approval side and the system-design side of the same gate, not just one or the other.

A Deal Desk Manager who owns how a signed deal turns into cash, chairs the monetization committee, runs deal desk day to day and builds the approval matrix is describing this exact loop: design the system, review the deal, keep the governance trail honest.

THE REQ, MAPPED

What the Deal Desk Manager opening asks for, and where the proof already sits.

What the role covers

> *Design and implement a new order-to-cash system and own the business case, including moving billing off Stripe to improve gross margin.*

> *Chair the monetization committee: bring data on pricing, packaging, and discounting, and drive decisions that keep Hex flexible.*

> *Run deal desk day to day: review non-standard deals, structure ramps and commits, keep turnaround fast without giving up margin or compliance.*

> *Build the approval matrix, deal guardrails and playbooks that let reps close standard deals without deal desk involvement.*

My Proof

Q2C system design: built PriceKeel's own CRM, CPQ configuration and audit trail from a blank page, the same system-selection and vendor tradeoffs a Stripe-to-new-billing migration calls for.

Monetization committee: led global pricing strategy and the Bleeders and Leakers governance program at Sensata, aligning Sales, Finance and Product on where a reprice would hold.

Deal desk day to day: ran multimillion-dollar customer quote negotiations and non-standard deal reviews at Sensata, recovering $700K+ in margin in 2 quarters.

Approval matrix and guardrails: PriceKeel's guardrail engine recommends an explainable discount limit learned from each company's own closed-won and closed-lost deals, backed by the audit trail Finance can check.

THE PROOF, IN DEPTH

Bleeders and Leakers: make every quote auditable before it reaches a segment view.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with cycle time and margin leakage checked before leadership set the next quarter's targets.

$700K+

Margin Recovered, 2 Quarters

Deal-by-deal review against competitive gaps and each customer's own deal history, the same non-standard-deal judgment this role runs daily.

53% to 61%

Distributor Margin Lift

Repriced the channel logic and documented it for governance review, so the new discount limits held past the first quarter.

$433M

Margin Gaps Surfaced

Every gap traced to a specific deal record by salesperson and product line, the same process-health detail a weekly deal desk report needs.

At PriceKeel that same instinct became the operating model: I run the CRM, CPQ configuration and the audit trail myself, so the quote and the governance record are never two different stories.

FIRST 30 DAYS

What the first month owning deal desk at Hex looks like.

WEEK 1

Learn the current Q2C flow and CPQ setup

Sit with Sales, Finance, Legal and Product to walk the current quote-to-cash flow, the Stripe billing setup and discount-approval limits, and shadow one non-standard deal review end to end.

Why first: the same instinct that had me learn PriceKeel's own CPQ configuration before building anything on top of it.

WEEK 2-3

Draft the Stripe-migration business case and a first guardrail

Build the first version of the order-to-cash business case, including the margin math on moving off Stripe, and ship one approval-matrix rule so reps can close a standard deal without deal desk involvement.

Why now: the same system-selection discipline that built PriceKeel's CRM and CPQ from a blank page.

WEEK 4

Chair the first monetization committee readout

Bring the first cycle-time, discount-leakage and days-to-close numbers to the monetization committee, and flag one provisioning gap worth fixing before the next growth tier.

Why this fast: the same segment-by-segment discipline that made the Bleeders and Leakers dashboard usable in a leadership review.

CLOSE

You are hiring someone to own quote-to-cash, chair the monetization committee and keep the governance trail honest on every deal. I have already built that discipline, from the system side and the deal side.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a $627M target**, distributor margins lifted **from 53% to 61%**, and $700K+ in margin recovered in 2 quarters through deal-by-deal governance.

What is harder to find is someone who has also designed a quote-to-cash system from a blank page for his own company's deal flow. **I built that at PriceKeel**, so the system-selection and governance discipline behind the Stripe migration and the approval matrix is not something I would need to learn on the job.
