Hiring Team, Rivian

At Plug Power I ran 15+ A/B tests across paid and landing-page flows, cutting CPA 25%, then automated the handoff between Salesforce, Adobe Analytics and Google Tag Manager so every test result closed the loop back into targeting. That is the job your posting is really describing: turn marketing science, segmentation, positioning, attribution, into a product roadmap for the upper funnel, not just a set of dashboards for someone else to read.

At Sensata I owned the product roadmap and a 100+ feature backlog for sensor solutions, prioritizing with engineering across 3 regions while building SQL and GA4 cohort frameworks across 50K+ connected devices to find which segments were ready to convert, lifting feature adoption 18% and launch conversion 15% along the way. Thirty-plus structured interviews with OEMs and distributors told me exactly where their buying journey broke before I touched a backlog item. That cohort-signal-in, roadmap-decision-out habit is the same one a personalization-minded web funnel runs on, discovery and configuration included.

I build AI agents on Claude at Applied Materials to automate the repetitive side of forecasting and market sizing, the same instinct behind using AI and agentic capabilities for discovery, education and decision support on a website. I also came up prioritizing a backlog alongside engineers inside Agile sprints spanning regions, the cross-functional rhythm a Senior PM needs to keep design, data science and engineering moving against one experimentation calendar.
